/**
    * Returns an array of arrays of {@code Annotation}s that
    * represent the annotations on the formal parameters, in
    * declaration order, of the {@code Executable} represented by
    * this object.  Synthetic and mandated parameters (see
    * explanation below), such as the outer "this" parameter to an
    * inner class constructor will be represented in the returned
    * array.  If the executable has no parameters (meaning no formal,
    * no synthetic, and no mandated parameters), a zero-length array
    * will be returned.  If the {@code Executable} has one or more
    * parameters, a nested array of length zero is returned for each
    * parameter with no annotations. The annotation
 objects contained
    * in the returned arrays are serializable.  The caller of this
    * method is free to modify the returned arrays; it will have no
    * effect on the arrays returned to other callers.
    *
    * A compiler may add extra parameters that are implicitly
    * declared in source ("mandated"), as well as parameters that
    * are neither implicitly nor explicitly declared in source
    * ("synthetic") to the parameter list for a method.  See {@link
```

```
    * java.lang.reflect.Parameter} for more information.
    *
    * @see java.lang.reflect.Parameter
    * @see java.lang.reflect.Parameter#getAnnotations
    * @return an array of arrays that represent the annotations on
    *    the formal and implicit parameters, in declaration order, of
    *    the executable represented by this object
    */
/**
    * Returns an {@code AnnotatedType} object that represents the use of a type to
    * specify the return type of the method/constructor represented
 by this
    * Executable.
    *
    * If this {@code Executable} object represents a constructor, the {@code
    * AnnotatedType} object represents the type of the constructed object.
    *
    * If this {@code Executable} object represents a method, the {@code
    * AnnotatedType} object represents the use of a type to specify the return
    * type of the method.
    *
    * @return an object representing the return type of the method
    * or constructor represented by this {@code Executable}
    */

*/
/**
* Basic interface for SAX error handlers.
*
* <blockquote>
* <em>This module, both source code and documentation, is in the
* Public Domain, and comes with <strong>NO WARRANTY</strong>.</em>
* See <a href='http://www.saxproject.org'>http://www.saxproject.org</a>
* for further information.
* </blockquote>
*
* <p>If a SAX application needs to implement customized error
* handling, it must implement this interface and then register an
* instance with the XML reader using the
* {@link org.xml.sax.XMLReader#setErrorHandler setErrorHandler}
* method.  The parser will then report all errors and warnings
* through this interface.</p>
*
* <p><strong>WARNING:</strong> If an application does <em>not</em>
 * register an ErrorHandler, XML parsing errors will go unreported,
* except that <em>SAXParseException</em>s will be thrown for fatal errors.
* In order to detect validity errors, an ErrorHandler that does something
* with {@link #error error()} calls must be registered.</p>
*
* <p>For XML processing errors, a SAX driver must use this interface
* in preference to throwing an exception: it is up to the application
* to decide whether to throw an exception for different types of
* errors and warnings.  Note, however, that there is no requirement that
* the parser continue to report additional errors after a call to
* {@link #fatalError fatalError}.  In other words, a SAX driver class
* may throw an exception after reporting any fatalError.
* Also parsers may throw appropriate exceptions for non-XML errors.
* For example, {@link XMLReader#parse XMLReader.parse()} would throw
* an IOException for errors accessing entities or the document.</p>
*
* @since SAX 1.0
* @author
 David Megginson
* @see org.xml.sax.XMLReader#setErrorHandler
* @see org.xml.sax.SAXParseException
```

* for further information.
* </blockquote>
*
* <p>This exception may include information for locating the error
* in the original XML document, as if it came from a {@link Locator}
* object.  Note that although the application
* will receive a SAXParseException as the argument to the handlers
* in the {@link org.xml.sax.ErrorHandler ErrorHandler} interface,
* the application is not actually required to throw the exception;
* instead,
 it can simply read the information in it and take a
* different action.</p>
*
* <p>Since this exception is a subclass of {@link org.xml.sax.SAXException
```

```
* SAXException}, it inherits the ability to wrap another exception.</p>
*
* @since SAX 1.0
* @author David Megginson
* @version 2.0.1 (sax2r2)
* @see org.xml.sax.SAXException
* @see org.xml.sax.Locator
* @see org.xml.sax.ErrorHandler

/**
* SAX2 extension handler for lexical events.

```
*
* <blockquote>
* <em>This module, both source code and documentation, is in the
* Public Domain, and comes with <strong>NO WARRANTY</strong>.</em>
* See <a href='http://www.saxproject.org'>http://www.saxproject.org</a>
* for further information.
* </blockquote>
*
* <p>This is an optional extension handler for SAX2 to provide
* lexical information about an XML document, such as comments
* and CDATA section boundaries.
* XML readers are not required to recognize this handler, and it
* is not part of core-only SAX2 distributions.</p>
*
* <p>The events in the lexical handler apply to the entire document,
* not just
 to the document element, and all lexical handler events
* must appear between the content handler's startDocument and
* endDocument events.</p>
*
* <p>To set the LexicalHandler for an XML reader, use the
* {@link org.xml.sax.XMLReader#setProperty setProperty} method
* with the property name
* <code>http://xml.org/sax/properties/lexical-handler</code>
* and an object implementing this interface (or null) as the value.
* If the reader does not report lexical events, it will throw a
* {@link org.xml.sax.SAXNotRecognizedException SAXNotRecognizedException}
* when you attempt to register the handler.</p>
*
* @since SAX 2.0 (extensions 1.0)
* @author David Megginson

*/
// NO WARRANTY! This class is in the public domain.
/**
* Interface for a list of XML attributes.
*
* <blockquote>
* This module, both source code and documentation, is in the
* Public Domain, and comes with NO WARRANTY.
* See http://www.saxproject.org
* for further information.
* </blockquote>
*

```
* <p>This interface allows access to a list of attributes in
* three different ways:</p>
*
* <ol>
* <li>by attribute index;</li>
* <li>by Namespace-qualified name; or</li>
* <li>by qualified (prefixed) name.</li>
* </ol>
*
* <p>The list will not contain attributes that were declared
* #IMPLIED but not specified in the start tag.
 It will also not
* contain attributes used as Namespace declarations (xmlns*) unless
* the <code>http://xml.org/sax/features/namespace-prefixes</code>
* feature is set to <var>true</var> (it is <var>false</var> by
* default).
* Because SAX2 conforms to the original "Namespaces in XML"
* recommendation, it normally does not
* give namespace declaration attributes a namespace URI.
* </p>
*
* <p>Some SAX2 parsers may support using an optional feature flag
* (<code>http://xml.org/sax/features/xmlns-uris</code>) to request
* that those attributes be given URIs, conforming to a later
* backwards-incompatible revision of that recommendation.  (The
* attribute's "local name" will be the prefix, or "xmlns" when
* defining a default element namespace.)  For portability, handler
* code should always resolve that conflict, rather than requiring
* parsers that can change the setting of that feature flag.  </p>
*
* <p>If the namespace-prefixes feature (see above) is
* <var>false</var>,
 access by qualified name may not be available; if
* the <code>http://xml.org/sax/features/namespaces</code> feature is
* <var>false</var>, access by Namespace-qualified names may not be
* available.</p>
*
* <p>This interface replaces the now-deprecated SAX1 {@link
* org.xml.sax.AttributeList AttributeList} interface, which does not
* contain Namespace support.  In addition to Namespace support, it
* adds the <var>getIndex</var> methods (below).</p>
*
* <p>The order of attributes in the list is unspecified, and will
* vary from implementation to implementation.</p>
*
* @since SAX 2.0
* @author David Megginson
* @see org.xml.sax.helpers.AttributesImpl
```

* @see org.xml.sax.ext.DeclHandler#attributeDecl

// NO WARRANTY!  This class is in the Public Domain.
/**
* Interface for an XML filter.
*
* <blockquote>
* <em>This module, both source code and documentation, is in the
* Public Domain, and comes with <strong>NO WARRANTY</strong>.</em>
* See <a href='http://www.saxproject.org'>http://www.saxproject.org</a>
* for further information.
* </blockquote>
*
* <p>An XML filter is like an XML reader, except that it obtains its
* events from another XML reader rather than a primary source like
* an XML document or database.  Filters can modify a stream of
* events as they pass on to the final application.</p>
*
* <p>The XMLFilterImpl helper class provides a convenient base
* for creating SAX2 filters,
 by passing on all {@link org.xml.sax.EntityResolver
* EntityResolver}, {@link org.xml.sax.DTDHandler DTDHandler},
* {@link org.xml.sax.ContentHandler ContentHandler} and {@link org.xml.sax.ErrorHandler
* ErrorHandler} events automatically.</p>
*
* @since SAX 2.0
* @author David Megginson
* @see org.xml.sax.helpers.XMLFilterImpl
*/

*/
/**
    * Sets the selection model's {@code valueIsAdjusting} property. When
    * {@code true}, upcoming changes to selection should be considered part
    * of a single change. This property is used internally and developers
    * typically need not call this method. For example, when the model is being
    * updated in response to a user drag, the value of the property is set
    * to {@code true} when the drag is initiated and set to {@code false}
    * when the drag is finished. This allows listeners to update only
    * when a change has been finalized, rather than handling all of the
    * intermediate values.
    * <p>
    * You may want to use this directly if making a series of changes
     * that should be considered part of a single change.
    * <p>
    * This is a cover method that delegates to the method of the same name on
    * the list's selection model. See the documentation for
    * {@link javax.swing.ListSelectionModel#setValueIsAdjusting} for
    * more details.
    *
    * @param b the new value for the property
    * @see ListSelectionModel#setValueIsAdjusting
    * @see javax.swing.event.ListSelectionEvent#getValueIsAdjusting
    * @see #getValueIsAdjusting

/**
* Receive notification of basic DTD-related events.
*

```
* <blockquote>
* <em>This module, both source code and documentation, is in the
* Public Domain, and comes with <strong>NO WARRANTY</strong>.</em>
* See <a href='http://www.saxproject.org'>http://www.saxproject.org</a>
* for further information.
* </blockquote>
*
* <p>If a SAX application needs information about notations and
* unparsed entities, then the application implements this
* interface and registers an instance with the SAX parser using
* the parser's setDTDHandler method.  The parser uses the
* instance to report notation and unparsed entity declarations to
* the application.</p>
*
* <p>Note that this interface includes only
 those DTD events that
* the XML recommendation <em>requires</em> processors to report:
* notation and unparsed entity declarations.</p>
*
* <p>The SAX parser may report these events in any order, regardless
* of the order in which the notations and unparsed entities were
* declared; however, all DTD events must be reported after the
* document handler's startDocument event, and before the first
* startElement event.
* (If the {@link org.xml.sax.ext.LexicalHandler LexicalHandler} is
* used, these events must also be reported before the endDTD event.)
* </p>
*
* <p>It is up to the application to store the information for
* future use (perhaps in a hash table or object tree).
* If the application encounters attributes of type "NOTATION",
* "ENTITY", or "ENTITIES", it can use the information that it
* obtained through this interface to find the entity and/or
* notation corresponding with the attribute value.</p>
*
* @since SAX 1.0
* @author David Megginson
* @see org.xml.sax.XMLReader#setDTDHandler

*/
/**
* This is an implementation of a Sun proprietary, exportable algorithm
* intended for use when protecting (or recovering the cleartext version of)
* sensitive keys.
* This algorithm is not intended as a general purpose cipher.
*
* This is how the algorithm works for key protection:
*
* p - user password
* s - random salt
* X - xor key
* P - to-be-protected key
* Y - protected key
* R - what gets stored in the keystore
*
* Step 1:
* Take the user's password, append a random salt (of fixed size) to it,
* and hash it: d1 = digest(p, s)
* Store d1 in X.
*
* Step 2:
* Take the user's password, append the digest result from the previous step,
* and hash it: dn = digest(p, dn-1).
* Store
```

```
 dn in X (append it to the previously stored digests).
* Repeat this step until the length of X matches the length of the private key
* P.
*
* Step 3:
* XOR X and P, and store the result in Y: Y = X XOR P.
*
* Step 4:
* Store s, Y, and digest(p, P) in the result buffer R:
* R = s + Y + digest(p, P), where "+" denotes concatenation.
* (NOTE: digest(p, P) is stored in the result buffer, so that when the key is
* recovered, we can check if the recovered key indeed matches the original
* key.) R is stored in the keystore.
*
* The protected key is recovered as follows:
*
* Step1 and Step2 are the same as above, except that the salt is not randomly
* generated, but taken from the result R of step 4 (the first length(s)
* bytes).
*
* Step 3 (XOR operation) yields the plaintext key.
*
* Then concatenate the password with the recovered key, and compare with the
* last length(digest(p, P)) bytes of R. If they match, the recovered key is
* indeed the same key as the original
 key.

*/
/**
* Encapsulate Namespace logic for use by SAX drivers.
*
* <blockquote>
* <em>This module, both source code and documentation, is in the
* Public Domain, and comes with <strong>NO WARRANTY</strong>.</em>
* </blockquote>
*
* <p>This class encapsulates the logic of Namespace processing:
* it tracks the declarations currently in force for each context
* and automatically processes qualified XML 1.0 names into their
* Namespace parts; it can also be used in reverse for generating
* XML 1.0 from Namespaces.</p>
*
* <p>Namespace support objects are reusable, but the reset method
* must be invoked between each session.</p>
*
```

```
* <p>Here is a simple session:</p>
*
* <pre>
* String parts[] = new
 String[3];
* NamespaceSupport support = new NamespaceSupport();
*
* support.pushContext();
* support.declarePrefix("", "http://www.w3.org/1999/xhtml");
* support.declarePrefix("dc", "http://www.purl.org/dc#");
*
* String parts[] = support.processName("p", parts, false);
* System.out.println("Namespace URI: " + parts[0]);
* System.out.println("Local name: " + parts[1]);
* System.out.println("Raw name: " + parts[2]);

* String parts[] = support.processName("dc:title", parts, false);
* System.out.println("Namespace URI: " + parts[0]);
* System.out.println("Local name: " + parts[1]);
* System.out.println("Raw name: " + parts[2]);

* support.popContext();
* </pre>
*
* <p>Note that this class is optimized for the use case where most
* elements do not contain Namespace declarations: if the same
* prefix/URI mapping is repeated for each context (for example), this
* class will be somewhat less efficient.</p>
*
* @author David Megginson

*/
/**
* Extended interface for mapping external entity references to input
* sources, or providing a missing external subset.  The
* {@link XMLReader#setEntityResolver XMLReader.setEntityResolver()} method
* is used to provide implementations of this interface to parsers.
* When a parser uses the methods in this interface, the
* {@link EntityResolver2#resolveEntity EntityResolver2.resolveEntity()}
* method (in this interface) is used <em>instead of</em> the older (SAX 1.0)
* {@link EntityResolver#resolveEntity EntityResolver.resolveEntity()} method.
*
* <blockquote>
* <em>This module, both source code and documentation, is in the
* Public Domain, and comes with <strong>NO WARRANTY</strong>.</em>
*
 </blockquote>
*
* <p>If a SAX application requires the customized handling which this
* interface defines for external entities, it must ensure that it uses
* an XMLReader with the
* <em>http://xml.org/sax/features/use-entity-resolver2</em> feature flag
* set to <em>true</em> (which is its default value when the feature is
* recognized).  If that flag is unrecognized, or its value is false,
* or the resolver does not implement this interface, then only the
* {@link EntityResolver} method will be used.
* </p>
*
* <p>That supports three categories of application that modify entity
* resolution.  <em>Old Style</em> applications won't know about this interface;
* they will provide an EntityResolver.
* <em>Transitional Mode</em> provide an EntityResolver2 and automatically
* get the benefit of its methods in any systems (parsers or other tools)
* supporting it, due to polymorphism.
* Both <em>Old Style</em> and <em>Transitional Mode</em> applications will
* work with any
```

SAX2 parser.
* New style applications will fail to run except on SAX2 parsers
* that support this particular feature.
* They will insist that feature flag have a value of "true", and the
* EntityResolver2 implementation they provide might throw an exception
* if the original SAX 1.0 style entity resolution method is invoked.
* </p>
*
* @see org.xml.sax.XMLReader#setEntityResolver
*
* @since SAX 2.0 (extensions 1.1 alpha)
* @author David Brownell

* <p>
* Due to the lazy class linking performed by many VMs, it is
* possible for a field or variable to be visible in a program
* before the associated class is loaded. Until the class is loaded
* all that is available is a signature string. If an attempt is made to
* set the value of such a field or variable from JDI, the appropriate

```
* type checking cannot be done because the destination class has not been
* loaded. The same is true for the element class of array elements.
* <p>
* It is not advisable to solve this problem by attempting a class load on
* the fly in this case. There
 are two problems in having the debugger load
* a class instead of waiting for it to load over the normal course
* of events.
* <ul>
* <li>There can be no guarantee that running the appropriate class
* loader won't cause a deadlock in loading the
* class. Class loaders can consist of arbitrary
* Java<sup><font size=-2>TM</font></sup> programming language code and the
* class loading methods are usually synchronized. Most of the work
* done by a debugger happens when threads are suspended. If another
* application thread is suspended within the same class loader,
*  a deadlock is very possible.
* <li>Changing the order in which classes are normally loaded may either mask
* or reveal bugs in the application. An unintrusive debugger should strive
* to leave unchanged the behavior of the application being debugged.
* </ul>
* To avoid these potential problems, this exception is thrown.
* <p>
* Note that this exception will be thrown until the class in question
* is visible
 to the class loader of enclosing class. (That is, the
* class loader of the enclosing class must be an <i>initiating</i> class
* loader for the class in question.)
* See
* <cite>The Java&trade; Virtual Machine Specification</cite>
* for more details.

*/
/**
* Receive notification of basic DTD-related events.
*
* <blockquote>
* <em>This module, both source code and documentation, is in the
* Public Domain, and comes with <strong>NO WARRANTY</strong>.</em>
* See <a href='http://www.saxproject.org'>http://www.saxproject.org</a>
* for further information.
* </blockquote>
*
* <p>If a SAX application needs information about notations and
* unparsed entities, then the application implements this
* interface and registers an instance with the SAX parser using
* the parser's setDTDHandler method.  The parser uses the
* instance to report notation and unparsed entity declarations to
* the application.</p>
```

```
*
* <p>Note that this interface includes only
 those DTD events that
* the XML recommendation <em>requires</em> processors to report:
* notation and unparsed entity declarations.</p>
*
* <p>The SAX parser may report these events in any order, regardless
* of the order in which the notations and unparsed entities were
* declared; however, all DTD events must be reported after the
* document handler's startDocument event, and before the first
* startElement event.
* (If the {@link org.xml.sax.ext.LexicalHandler LexicalHandler} is
* used, these events must also be reported before the endDTD event.)
* </p>
*
* <p>It is up to the application to store the information for
* future use (perhaps in a hash table or object tree).
* If the application encounters attributes of type "NOTATION",
* "ENTITY", or "ENTITIES", it can use the information that it
* obtained through this interface to find the entity and/or
* notation corresponding with the attribute value.</p>
*
* @since SAX 1.0

*/
// This class is in the Public Domain. NO WARRANTY!
/**
* Encapsulate Namespace logic for use by applications using SAX,
* or internally by SAX drivers.
*
* <blockquote>
* This module, both source code and documentation, is in the

```
* Public Domain, and comes with <strong>NO WARRANTY</strong>.</em>
* See <a href='http://www.saxproject.org'>http://www.saxproject.org</a>
* for further information.
* </blockquote>
*
* <p>This class encapsulates the logic of Namespace processing: it
* tracks the declarations currently in force for each context and
* automatically processes qualified XML names into their Namespace
* parts; it can also be used in reverse for generating XML qnames
* from Namespaces.</p>
 *
* <p>Namespace support objects are reusable, but the reset method
* must be invoked between each session.</p>
*
* <p>Here is a simple session:</p>
*
* <pre>
* String parts[] = new String[3];
* NamespaceSupport support = new NamespaceSupport();
*
* support.pushContext();
* support.declarePrefix("", "http://www.w3.org/1999/xhtml");
* support.declarePrefix("dc", "http://www.purl.org/dc#");
*
* parts = support.processName("p", parts, false);
* System.out.println("Namespace URI: " + parts[0]);
* System.out.println("Local name: " + parts[1]);
* System.out.println("Raw name: " + parts[2]);
*
* parts = support.processName("dc:title", parts, false);
* System.out.println("Namespace URI: " + parts[0]);
* System.out.println("Local name: " + parts[1]);
* System.out.println("Raw name: " + parts[2]);
*
* support.popContext();
* </pre>
*
* <p>Note that this class is optimized for the use case where most
* elements do not contain Namespace declarations: if the same
 * prefix/URI mapping is repeated for each context (for example), this
* class will be somewhat less efficient.</p>
*
* <p>Although SAX drivers (parsers) may choose to use this class to
* implement namespace handling, they are not required to do so.
* Applications must track namespace information themselves if they
* want to use namespace information.
*
* @since SAX 2.0
```

*/
/**
* The interface that all standard implementations of
* <code>CachedRowSet</code> must implement.
* <P>
* The reference implementation of the <code>CachedRowSet</code> interface provided
* by Oracle Corporation is a standard implementation. Developers may use this implementation
* just as it is, they may extend it, or they may choose to write their own implementations

```
* of this interface.
* <P>
* A <code>CachedRowSet</code> object is a container for rows of data
* that caches its rows in memory, which makes it possible to operate without always being
* connected to its data source. Further, it is a
* JavaBeans&trade; component and is scrollable,
* updatable, and serializable. A <code>CachedRowSet</code>
 object typically
* contains rows from a result set, but it can also contain rows from any file
* with a tabular format, such as a spread sheet.  The reference implementation
* supports getting data only from a <code>ResultSet</code> object, but
* developers can extend the <code>SyncProvider</code> implementations to provide
* access to other tabular data sources.
* <P>
* An application can modify the data in a <code>CachedRowSet</code> object, and
* those modifications can then be propagated back to the source of the data.
* <P>
* A <code>CachedRowSet</code> object is a <i>disconnected</i> rowset, which means
* that it makes use of a connection to its data source only briefly. It connects to its
* data source while it is reading data to populate itself with rows and again
* while it is propagating changes back to its underlying data source. The rest
* of the time, a <code>CachedRowSet</code> object is disconnected, including
* while its data is being modified.
 Being disconnected makes a <code>RowSet</code>
* object much leaner and therefore much easier to pass to another component.  For
* example, a disconnected <code>RowSet</code> object can be serialized and passed
* over the wire to a thin client such as a personal digital assistant (PDA).
*
*
* <h3>1.0 Creating a <code>CachedRowSet</code> Object</h3>
* The following line of code uses the default constructor for
* <code>CachedRowSet</code>
* supplied in the reference implementation (RI) to create a default
* <code>CachedRowSet</code> object.
* <PRE>
*     CachedRowSetImpl crs = new CachedRowSetImpl();
* </PRE>
* This new <code>CachedRowSet</code> object will have its properties set to the
* default properties of a <code>BaseRowSet</code> object, and, in addition, it will
* have an <code>RIOptimisticProvider</code> object as its synchronization provider.
* <code>RIOptimisticProvider</code>, one of two <code>SyncProvider</code>
* implementations included in the RI, is the
 default provider that the
* <code>SyncFactory</code> singleton will supply when no synchronization
* provider is specified.
* <P>
* A <code>SyncProvider</code> object provides a <code>CachedRowSet</code> object
* with a reader (a <code>RowSetReader</code> object) for reading data from a
```

```
* data source to populate itself with data. A reader can be implemented to read
* data from a <code>ResultSet</code> object or from a file with a tabular format.
* A <code>SyncProvider</code> object also provides
* a writer (a <code>RowSetWriter</code> object) for synchronizing any
* modifications to the <code>CachedRowSet</code> object's data made while it was
* disconnected with the data in the underlying data source.
* <P>
* A writer can be implemented to exercise various degrees of care in checking
* for conflicts and in avoiding them.
* (A conflict occurs when a value in the data source has been changed after
* the rowset populated itself with that value.)
* The <code>RIOptimisticProvider</code>
 implementation assumes there will be
* few or no conflicts and therefore sets no locks. It updates the data source
* with values from the <code>CachedRowSet</code> object only if there are no
* conflicts.
* Other writers can be implemented so that they always write modified data to
* the data source, which can be accomplished either by not checking for conflicts
* or, on the other end of the spectrum, by setting locks sufficient to prevent data
* in the data source from being changed. Still other writer implementations can be
* somewhere in between.
* <P>
* A <code>CachedRowSet</code> object may use any
* <code>SyncProvider</code> implementation that has been registered
* with the <code>SyncFactory</code> singleton. An application
* can find out which <code>SyncProvider</code> implementations have been
* registered by calling the following line of code.
* <PRE>
*     java.util.Enumeration providers = SyncFactory.getRegisteredProviders();
* </PRE>
* <P>
 * There are two ways for a <code>CachedRowSet</code> object to specify which
* <code>SyncProvider</code> object it will use.
* <UL>
*    <LI>Supplying the name of the implementation to the constructor<BR>
*    The following line of code creates the <code>CachedRowSet</code>
*    object <i>crs2</i> that is initialized with default values except that its
*    <code>SyncProvider</code> object is the one specified.
*    <PRE>
*        CachedRowSetImpl crs2 = new CachedRowSetImpl(
*                        "com.fred.providers.HighAvailabilityProvider");
*    </PRE>
*    <LI>Setting the <code>SyncProvider</code> using the <code>CachedRowSet</code>
*       method <code>setSyncProvider</code><BR>
*     The following line of code resets the <code>SyncProvider</code> object
*     for <i>crs</i>, the <code>CachedRowSet</code> object created with the
*     default constructor.
*     <PRE>
```

```
*          crs.setSyncProvider("com.fred.providers.HighAvailabilityProvider");
 *      </PRE>
* </UL>
* See the comments for <code>SyncFactory</code> and <code>SyncProvider</code> for
* more details.
*
*
* <h3>2.0 Retrieving Data from a <code>CachedRowSet</code> Object</h3>
* Data is retrieved from a <code>CachedRowSet</code> object by using the
* getter methods inherited from the <code>ResultSet</code>
* interface.  The following examples, in which <code>crs</code> is a
* <code>CachedRowSet</code>
* object, demonstrate how to iterate through the rows, retrieving the column
* values in each row.  The first example uses the version of the
* getter methods that take a column number; the second example
* uses the version that takes a column name. Column numbers are generally
* used when the <code>RowSet</code> object's command
* is of the form <code>SELECT * FROM TABLENAME</code>; column names are most
* commonly used when the command specifies columns by name.
* <PRE>
*    while (crs.next()) {
*        String name = crs.getString(1);
 *        int id = crs.getInt(2);
*        Clob comment = crs.getClob(3);
*        short dept = crs.getShort(4);
*        System.out.println(name + "  " + id + "  " + comment + "  " + dept);
*    }
* </PRE>
*
* <PRE>
*    while (crs.next()) {
*        String name = crs.getString("NAME");
*        int id = crs.getInt("ID");
*        Clob comment = crs.getClob("COM");
*        short dept = crs.getShort("DEPT");
*        System.out.println(name + "  " + id + "  " + comment + "  " + dept);
*    }
* </PRE>
* <h4>2.1 Retrieving <code>RowSetMetaData</code></h4>
* An application can get information about the columns in a <code>CachedRowSet</code>
* object by calling <code>ResultSetMetaData</code> and <code>RowSetMetaData</code>
* methods on a <code>RowSetMetaData</code> object. The following code fragment,
* in which <i>crs</i> is a <code>CachedRowSet</code> object, illustrates the process.
* The first line creates a <code>RowSetMetaData</code> object with information
 * about the columns in <i>crs</i>.  The method <code>getMetaData</code>,
* inherited from the <code>ResultSet</code> interface, returns a
* <code>ResultSetMetaData</code> object, which is cast to a
* <code>RowSetMetaData</code> object before being assigned to the variable
```

```
* <i>rsmd</i>.  The second line finds out how many columns <i>jrs</i> has, and
* the third line gets the JDBC type of values stored in the second column of
* <code>jrs</code>.
* <PRE>
*     RowSetMetaData rsmd = (RowSetMetaData)crs.getMetaData();
*     int count = rsmd.getColumnCount();
*     int type = rsmd.getColumnType(2);
* </PRE>
* The <code>RowSetMetaData</code> interface differs from the
* <code>ResultSetMetaData</code> interface in two ways.
* <UL>
*   <LI><i>It includes <code>setter</code> methods:</i> A <code>RowSet</code>
*   object uses these methods internally when it is populated with data from a
*   different <code>ResultSet</code> object.
*
*   <LI><i>It contains fewer <code>getter</code>
 methods:</i> Some
*   <code>ResultSetMetaData</code> methods to not apply to a <code>RowSet</code>
*   object. For example, methods retrieving whether a column value is writable
*   or read only do not apply because all of a <code>RowSet</code> object's
*   columns will be writable or read only, depending on whether the rowset is
*   updatable or not.
* </UL>
* NOTE: In order to return a <code>RowSetMetaData</code> object, implementations must
* override the <code>getMetaData()</code> method defined in
* <code>java.sql.ResultSet</code> and return a <code>RowSetMetaData</code> object.
*
* <h3>3.0 Updating a <code>CachedRowSet</code> Object</h3>
* Updating a <code>CachedRowSet</code> object is similar to updating a
* <code>ResultSet</code> object, but because the rowset is not connected to
* its data source while it is being updated, it must take an additional step
* to effect changes in its underlying data source. After calling the method
* <code>updateRow</code> or
 <code>insertRow</code>, a
* <code>CachedRowSet</code>
* object must also call the method <code>acceptChanges</code> to have updates
* written to the data source. The following example, in which the cursor is
* on a row in the <code>CachedRowSet</code> object <i>crs</i>, shows
* the code required to update two column values in the current row and also
* update the <code>RowSet</code> object's underlying data source.
* <PRE>
*     crs.updateShort(3, 58);
*     crs.updateInt(4, 150000);
*     crs.updateRow();
*     crs.acceptChanges();
* </PRE>
* <P>
* The next example demonstrates moving to the insert row, building a new
```

```
* row on the insert row, inserting it into the rowset, and then calling the
* method <code>acceptChanges</code> to add the new row to the underlying data
* source.  Note that as with the getter methods, the  updater methods may take
* either a column index or a column name to designate the column being acted upon.
* <PRE>
*     crs.moveToInsertRow();
 *     crs.updateString("Name", "Shakespeare");
*     crs.updateInt("ID", 10098347);
*     crs.updateShort("Age", 58);
*     crs.updateInt("Sal", 150000);
*     crs.insertRow();
*     crs.moveToCurrentRow();
*     crs.acceptChanges();
* </PRE>
* <P>
* NOTE: Where the <code>insertRow()</code> method inserts the contents of a
* <code>CachedRowSet</code> object's insert row is implementation-defined.
* The reference implementation for the <code>CachedRowSet</code> interface
* inserts a new row immediately following the current row, but it could be
* implemented to insert new rows in any number of other places.
* <P>
* Another thing to note about these examples is how they use the method
* <code>acceptChanges</code>.  It is this method that propagates changes in
* a <code>CachedRowSet</code> object back to the underlying data source,
* calling on the <code>RowSet</code> object's writer internally to write
* changes to the data source. To do this, the writer has to incur
 the expense
* of establishing a connection with that data source. The
* preceding two code fragments call the method <code>acceptChanges</code>
* immediately after calling <code>updateRow</code> or <code>insertRow</code>.
* However, when there are multiple rows being changed, it is more efficient to call
* <code>acceptChanges</code> after all calls to <code>updateRow</code>
* and <code>insertRow</code> have been made.  If <code>acceptChanges</code>
* is called only once, only one connection needs to be established.
*
* <h3>4.0 Updating the Underlying Data Source</h3>
* When the method <code>acceptChanges</code> is executed, the
* <code>CachedRowSet</code> object's writer, a <code>RowSetWriterImpl</code>
* object, is called behind the scenes to write the changes made to the
* rowset to the underlying data source. The writer is implemented to make a
* connection to the data source and write updates to it.
* <P>
* A writer is made available through an implementation of the
 * <code>SyncProvider</code> interface, as discussed in section 1,
* "Creating a <code>CachedRowSet</code> Object."
* The default reference implementation provider, <code>RIOptimisticProvider</code>,
* has its writer implemented to use an optimistic concurrency control
* mechanism. That is, it maintains no locks in the underlying database while
```

```
* the rowset is disconnected from the database and simply checks to see if there
* are any conflicts before writing data to the data source.  If there are any
* conflicts, it does not write anything to the data source.
* <P>
* The reader/writer facility
* provided by the <code>SyncProvider</code> class is pluggable, allowing for the
* customization of data retrieval and updating. If a different concurrency
* control mechanism is desired, a different implementation of
* <code>SyncProvider</code> can be plugged in using the method
* <code>setSyncProvider</code>.
* <P>
* In order to use the optimistic concurrency control routine,
 the
* <code>RIOptismisticProvider</code> maintains both its current
* value and its original value (the value it had immediately preceding the
* current value). Note that if no changes have been made to the data in a
* <code>RowSet</code> object, its current values and its original values are the same,
* both being the values with which the <code>RowSet</code> object was initially
* populated.  However, once any values in the <code>RowSet</code> object have been
* changed, the current values and the original values will be different, though at
* this stage, the original values are still the initial values. With any subsequent
* changes to data in a <code>RowSet</code> object, its original values and current
* values will still differ, but its original values will be the values that
* were previously the current values.
* <P>
* Keeping track of original values allows the writer to compare the <code>RowSet</code>
* object's original value with the value in the database. If
 the values in
* the database differ from the <code>RowSet</code> object's original values, which means that
* the values in the database have been changed, there is a conflict.
* Whether a writer checks for conflicts, what degree of checking it does, and how
* it handles conflicts all depend on how it is implemented.
*
* <h3>5.0 Registering and Notifying Listeners</h3>
* Being JavaBeans components, all rowsets participate in the JavaBeans event
* model, inheriting methods for registering listeners and notifying them of
* changes from the <code>BaseRowSet</code> class.  A listener for a
* <code>CachedRowSet</code> object is a component that wants to be notified
* whenever there is a change in the rowset.  For example, if a
* <code>CachedRowSet</code> object contains the results of a query and
* those
* results are being displayed in, say, a table and a bar graph, the table and
* bar graph could be registered as listeners with the rowset so that they can
* update themselves
 to reflect changes. To become listeners, the table and
* bar graph classes must implement the <code>RowSetListener</code> interface.
* Then they can be added to the <Code>CachedRowSet</code> object's list of
* listeners, as is illustrated in the following lines of code.
```

```
* <PRE>
*    crs.addRowSetListener(table);
*    crs.addRowSetListener(barGraph);
* </PRE>
* Each <code>CachedRowSet</code> method that moves the cursor or changes
* data also notifies registered listeners of the changes, so
* <code>table</code> and <code>barGraph</code> will be notified when there is
* a change in <code>crs</code>.
*
* <h3>6.0 Passing Data to Thin Clients</h3>
* One of the main reasons to use a <code>CachedRowSet</code> object is to
* pass data between different components of an application. Because it is
* serializable, a <code>CachedRowSet</code> object can be used, for example,
* to send the result of a query executed by an enterprise JavaBeans component
* running in a server environment
 over a network to a client running in a
* web browser.
* <P>
* While a <code>CachedRowSet</code> object is disconnected, it can be much
* leaner than a <code>ResultSet</code> object with the same data.
* As a result, it can be especially suitable for sending data to a thin client
* such as a PDA, where it would be inappropriate to use a JDBC driver
* due to resource limitations or security considerations.
* Thus, a <code>CachedRowSet</code> object provides a means to "get rows in"
* without the need to implement the full JDBC API.
*
* <h3>7.0 Scrolling and Updating</h3>
* A second major use for <code>CachedRowSet</code> objects is to provide
* scrolling and updating for <code>ResultSet</code> objects that
* do not provide these capabilities themselves.  In other words, a
* <code>CachedRowSet</code> object can be used to augment the
* capabilities of a JDBC technology-enabled driver (hereafter called a
* "JDBC driver") when the DBMS does not provide full support
 for scrolling and
* updating. To achieve the effect of making a non-scrollble and read-only
* <code>ResultSet</code> object scrollable and updatable, a programmer
* simply needs to create a <code>CachedRowSet</code> object populated
* with that <code>ResultSet</code> object's data.  This is demonstrated
* in the following code fragment, where <code>stmt</code> is a
* <code>Statement</code> object.
* <PRE>
*    ResultSet rs = stmt.executeQuery("SELECT * FROM EMPLOYEES");
*    CachedRowSetImpl crs = new CachedRowSetImpl();
*    crs.populate(rs);
* </PRE>
* <P>
* The object <code>crs</code> now contains the data from the table
* <code>EMPLOYEES</code>, just as the object <code>rs</code> does.
```

```
* The difference is that the cursor for <code>crs</code> can be moved
* forward, backward, or to a particular row even if the cursor for
* <code>rs</code> can move only forward.  In addition, <code>crs</code> is
* updatable even if <code>rs</code> is not because by default, a
*
 <code>CachedRowSet</code> object is both scrollable and updatable.
* <P>
* In summary, a <code>CachedRowSet</code> object can be thought of as simply
* a disconnected set of rows that are being cached outside of a data source.
* Being thin and serializable, it can easily be sent across a wire,
* and it is well suited to sending data to a thin client. However, a
* <code>CachedRowSet</code> object does have a limitation: It is limited in
* size by the amount of data it can store in memory at one time.
*
* <h3>8.0 Getting Universal Data Access</h3>
* Another advantage of the <code>CachedRowSet</code> class is that it makes it
* possible to retrieve and store data from sources other than a relational
* database. The reader for a rowset can be implemented to read and populate
* its rowset with data from any tabular data source, including a spreadsheet
* or flat file.
* Because both a <code>CachedRowSet</code> object and its metadata can be
* created from scratch, a component
 that acts as a factory for rowsets
* can use this capability to create a rowset containing data from
* non-SQL data sources. Nevertheless, it is expected that most of the time,
* <code>CachedRowSet</code> objects will contain data that was fetched
* from an SQL database using the JDBC API.
*
* <h3>9.0 Setting Properties</h3>
* All rowsets maintain a set of properties, which will usually be set using
* a tool.  The number and kinds of properties a rowset has will vary,
* depending on what the rowset does and how it gets its data.  For example,
* rowsets that get their data from a <code>ResultSet</code> object need to
* set the properties that are required for making a database connection.
* If a rowset uses the <code>DriverManager</code> facility to make a
* connection, it needs to set a property for the JDBC URL that identifies
* the appropriate driver, and it needs to set the properties that give the
* user name and password.
* If, on the other hand, the rowset uses a
 <code>DataSource</code> object
* to make the connection, which is the preferred method, it does not need to
* set the property for the JDBC URL.  Instead, it needs to set
* properties for the logical name of the data source, for the user name,
* and for the password.
* <P>
* NOTE:  In order to use a <code>DataSource</code> object for making a
* connection, the <code>DataSource</code> object must have been registered
* with a naming service that uses the Java Naming and Directory
```

```
* Interface&trade; (JNDI) API.  This registration
* is usually done by a person acting in the capacity of a system
* administrator.
* <P>
* In order to be able to populate itself with data from a database, a rowset
* needs to set a command property.  This property is a query that is a
* <code>PreparedStatement</code> object, which allows the query to have
* parameter placeholders that are set at run time, as opposed to design time.
* To set these placeholder parameters with values, a rowset provides
 * setter methods for setting values of each data type,
* similar to the setter methods provided by the <code>PreparedStatement</code>
* interface.
* <P>
* The following code fragment illustrates how the <code>CachedRowSet</code>
* object <code>crs</code> might have its command property set.  Note that if a
* tool is used to set properties, this is the code that the tool would use.
* <PRE>{@code
*    crs.setCommand("SELECT FIRST_NAME, LAST_NAME, ADDRESS FROM CUSTOMERS " +
*                   "WHERE CREDIT_LIMIT > ? AND REGION = ?");
* } </PRE>
* <P>
* The values that will be used to set the command's placeholder parameters are
* contained in the <code>RowSet</code> object's <code>params</code> field, which is a
* <code>Vector</code> object.
* The <code>CachedRowSet</code> class provides a set of setter
* methods for setting the elements in its <code>params</code> field.  The
* following code fragment demonstrates setting the two parameters in the
* query from the
 previous example.
* <PRE>
*    crs.setInt(1, 5000);
*    crs.setString(2, "West");
* </PRE>
* <P>
* The <code>params</code> field now contains two elements, each of which is
* an array two elements long.  The first element is the parameter number;
* the second is the value to be set.
* In this case, the first element of <code>params</code> is
* <code>1</code>, <code>5000</code>, and the second element is <code>2</code>,
* <code>"West"</code>.  When an application calls the method
* <code>execute</code>, it will in turn call on this <code>RowSet</code> object's reader,
* which will in turn invoke its <code>readData</code> method. As part of
* its implementation, <code>readData</code> will get the values in
* <code>params</code> and use them to set the command's placeholder
* parameters.
* The following code fragment gives an idea of how the reader
* does this, after obtaining the <code>Connection</code> object
* <code>con</code>.
```

```
* <PRE>{@code
*    PreparedStatement
 pstmt = con.prepareStatement(crs.getCommand());
*    reader.decodeParams();
*    // decodeParams figures out which setter methods to use and does something
*    // like the following:
*    //    for (i = 0; i < params.length; i++) {
*    //        pstmt.setObject(i + 1, params[i]);
*    //    }
* }</PRE>
* <P>
* At this point, the command for <code>crs</code> is the query {@code "SELECT
* FIRST_NAME, LAST_NAME, ADDRESS FROM CUSTOMERS WHERE CREDIT_LIMIT > 5000
* AND REGION = "West"}.  After the <code>readData</code> method executes
* this command with the following line of code, it will have the data from
* <code>rs</code> with which to populate <code>crs</code>.
* <PRE>{@code
*     ResultSet rs = pstmt.executeQuery();
* }</PRE>
* <P>
* The preceding code fragments give an idea of what goes on behind the
* scenes; they would not appear in an application, which would not invoke
* methods like <code>readData</code> and <code>decodeParams</code>.
* In contrast, the
 following code fragment shows what an application might do.
* It sets the rowset's command, sets the command's parameters, and executes
* the command. Simply by calling the <code>execute</code> method,
* <code>crs</code> populates itself with the requested data from the
* table <code>CUSTOMERS</code>.
* <PRE>{@code
*    crs.setCommand("SELECT FIRST_NAME, LAST_NAME, ADDRESS FROM CUSTOMERS" +
*                   "WHERE CREDIT_LIMIT > ? AND REGION = ?");
*    crs.setInt(1, 5000);
*    crs.setString(2, "West");
*    crs.execute();
* }</PRE>
*
* <h3>10.0 Paging Data</h3>
* Because a <code>CachedRowSet</code> object stores data in memory,
* the amount of data that it can contain at any one
* time is determined by the amount of memory available. To get around this limitation,
* a <code>CachedRowSet</code> object can retrieve data from a <code>ResultSet</code>
* object in chunks of data, called <i>pages</i>. To take advantage of this mechanism,
* an application sets the number
 of rows to be included in a page using the method
* <code>setPageSize</code>. In other words, if the page size is set to five, a chunk
* of five rows of
* data will be fetched from the data source at one time. An application can also
```

```
* optionally set the maximum number of rows that may be fetched at one time.  If the
* maximum number of rows is set to zero, or no maximum number of rows is set, there is
* no limit to the number of rows that may be fetched at a time.
* <P>
* After properties have been set,
* the <code>CachedRowSet</code> object must be populated with data
* using either the method <code>populate</code> or the method <code>execute</code>.
* The following lines of code demonstrate using the method <code>populate</code>.
* Note that this version of the method takes two parameters, a <code>ResultSet</code>
* handle and the row in the <code>ResultSet</code> object from which to start
* retrieving rows.
* <PRE>
*     CachedRowSet crs = new CachedRowSetImpl();
 *     crs.setMaxRows(20);
*     crs.setPageSize(4);
*     crs.populate(rsHandle, 10);
* </PRE>
* When this code runs, <i>crs</i> will be populated with four rows from
* <i>rsHandle</i> starting with the tenth row.
* <P>
* The next code fragment shows populating a <code>CachedRowSet</code> object using the
* method <code>execute</code>, which may or may not take a <code>Connection</code>
* object as a parameter.  This code passes <code>execute</code> the <code>Connection</code>
* object <i>conHandle</i>.
* <P>
* Note that there are two differences between the following code
* fragment and the previous one. First, the method <code>setMaxRows</code> is not
* called, so there is no limit set for the number of rows that <i>crs</i> may contain.
* (Remember that <i>crs</i> always has the overriding limit of how much data it can
* store in memory.) The second difference is that the you cannot pass the method
* <code>execute</code> the number of the row in the <code>ResultSet</code>
 object
* from which to start retrieving rows. This method always starts with the first row.
* <PRE>
*     CachedRowSet crs = new CachedRowSetImpl();
*     crs.setPageSize(5);
*     crs.execute(conHandle);
* </PRE>
* After this code has run, <i>crs</i> will contain five rows of data from the
* <code>ResultSet</code> object produced by the command for <i>crs</i>. The writer
* for <i>crs</i> will use <i>conHandle</i> to connect to the data source and
* execute the command for <i>crs</i>. An application is then able to operate on the
* data in <i>crs</i> in the same way that it would operate on data in any other
* <code>CachedRowSet</code> object.
* <P>
* To access the next page (chunk of data), an application calls the method
* <code>nextPage</code>.  This method creates a new <code>CachedRowSet</code> object
* and fills it with the next page of data.  For example, assume that the
```

```
* <code>CachedRowSet</code> object's command returns a <code>ResultSet</code> object
 * <i>rs</i> with 1000 rows of data.  If the page size has been set to 100, the first
*  call to the method <code>nextPage</code> will create a <code>CachedRowSet</code> object
* containing the first 100 rows of <i>rs</i>. After doing what it needs to do with the
* data in these first 100 rows, the application can again call the method
* <code>nextPage</code> to create another <code>CachedRowSet</code> object
* with the second 100 rows from <i>rs</i>. The data from the first <code>CachedRowSet</code>
* object will no longer be in memory because it is replaced with the data from the
* second <code>CachedRowSet</code> object. After the tenth call to the method <code>nextPage</code>,
* the tenth <code>CachedRowSet</code> object will contain the last 100 rows of data from
* <i>rs</i>, which are stored in memory. At any given time, the data from only one
* <code>CachedRowSet</code> object is stored in memory.
* <P>
* The method <code>nextPage</code> returns <code>true</code>
 as long as the current
* page is not the last page of rows and <code>false</code> when there are no more pages.
* It can therefore be used in a <code>while</code> loop to retrieve all of the pages,
* as is demonstrated in the following lines of code.
* <PRE>
*     CachedRowSet crs = CachedRowSetImpl();
*     crs.setPageSize(100);
*     crs.execute(conHandle);
*
*     while(crs.nextPage()) {
*         while(crs.next()) {
*             . . . // operate on chunks (of 100 rows each) in crs,
*                   // row by row
*         }
*     }
* </PRE>
* After this code fragment has been run, the application will have traversed all
* 1000 rows, but it will have had no more than 100 rows in memory at a time.
* <P>
* The <code>CachedRowSet</code> interface also defines the method <code>previousPage</code>.
* Just as the method <code>nextPage</code> is analogous to the <code>ResultSet</code>
* method <code>next</code>, the method <code>previousPage</code> is analogous to
 * the <code>ResultSet</code> method <code>previous</code>.  Similar to the method
* <code>nextPage</code>, <code>previousPage</code> creates a <code>CachedRowSet</code>
* object containing the number of rows set as the page size.  So, for instance, the
* method <code>previousPage</code> could be used in a <code>while</code> loop at
* the end of the preceding code fragment to navigate back through the pages from the last
* page to the first page.
* The method <code>previousPage</code> is also similar to <code>nextPage</code>
* in that it can be used in a <code>while</code>
* loop, except that it returns <code>true</code> as long as there is another page
* preceding it and <code>false</code> when there are no more pages ahead of it.
* <P>
* By positioning the cursor after the last row for each page,
```

```
* as is done in the following code fragment, the method <code>previous</code>
* navigates from the last row to the first row in each page.
* The code could also have left the cursor
 before the first row on each page and then
* used the method <code>next</code> in a <code>while</code> loop to navigate each page
* from the first row to the last row.
* <P>
* The following code fragment assumes a continuation from the previous code fragment,
* meaning that the cursor for the tenth <code>CachedRowSet</code> object is on the
* last row.  The code moves the cursor to after the last row so that the first
* call to the method <code>previous</code> will put the cursor back on the last row.
* After going through all of the rows in the last page (the <code>CachedRowSet</code>
* object <i>crs</i>), the code then enters
* the <code>while</code> loop to get to the ninth page, go through the rows backwards,
* go to the eighth page, go through the rows backwards, and so on to the first row
* of the first page.
*
* <PRE>
*     crs.afterLast();
*     while(crs.previous())  {
*         . . . // navigate through the rows, last to first
*     {
*     while(crs.previousPage())
  {
*         crs.afterLast();
*         while(crs.previous())  {
*             . . . // go from the last row to the first row of each page
*         }
*     }
* </PRE>

*/
// NO WARRANTY!  This class is in the Public Domain.
/**
* Interface for reading an XML document using callbacks.
*
* <blockquote>
* <em>This module, both source code and documentation, is in the
* Public Domain, and comes with <strong>NO WARRANTY</strong>.</em>
* See <a href='http://www.saxproject.org'>http://www.saxproject.org</a>
* for further information.
* </blockquote>
*
* <p><strong>Note:</strong> despite its name, this interface does
* <em>not</em> extend the standard Java {@link java.io.Reader Reader}
* interface, because reading XML is a fundamentally different activity
* than reading character data.</p>
*
* <p>XMLReader is the interface that an XML parser's SAX2 driver must
* implement.
  This interface allows an application to set and
* query features and properties in the parser, to register
* event handlers for document processing, and to initiate
```

```
* a document parse.</p>
*
* <p>All SAX interfaces are assumed to be synchronous: the
* {@link #parse parse} methods must not return until parsing
* is complete, and readers must wait for an event-handler callback
* to return before reporting the next event.</p>
*
* <p>This interface replaces the (now deprecated) SAX 1.0 {@link
* org.xml.sax.Parser Parser} interface.  The XMLReader interface
* contains two important enhancements over the old Parser
* interface (as well as some minor ones):</p>
*
* <ol>
* <li>it adds a standard way to query and set features and
*  properties; and</li>
* <li>it adds Namespace support, which is required for many
*  higher-level XML standards.</li>
* </ol>
*
* <p>There are adapters available to convert a SAX1 Parser to
* a SAX2 XMLReader and vice-versa.</p>
*
* @since
 SAX 2.0
* @author David Megginson
* @see org.xml.sax.XMLFilter
* @see org.xml.sax.helpers.ParserAdapter
* @see org.xml.sax.helpers.XMLReaderAdapter
*/

*/
/**
* Interface for an element's attribute specifications.
*
* <blockquote>
* <em>This module, both source code and documentation, is in the
* Public Domain, and comes with <strong>NO WARRANTY</strong>.</em>
* See <a href='http://www.saxproject.org'>http://www.saxproject.org</a>
* for further information.
* </blockquote>
*
* <p>This is the original SAX1 interface for reporting an element's
* attributes.  Unlike the new {@link org.xml.sax.Attributes Attributes}
* interface, it does not support Namespace-related information.</p>
*
* <p>When an attribute list is supplied as part of a
* {@link org.xml.sax.DocumentHandler#startElement startElement}
* event, the list will return valid results only
 during the
* scope of the event; once the event handler returns control
* to the parser, the attribute list is invalid.  To save a
* persistent copy of the attribute list, use the SAX1
* {@link org.xml.sax.helpers.AttributeListImpl AttributeListImpl}
* helper class.</p>
*
* <p>An attribute list includes only attributes that have been
* specified or defaulted: #IMPLIED attributes will not be included.</p>
*
* <p>There are two ways for the SAX application to obtain information
* from the AttributeList.  First, it can iterate through the entire
* list:</p>
*
* <pre>
* public void startElement (String name, AttributeList atts) {
*   for (int i = 0; i < atts.getLength(); i++) {
*     String name = atts.getName(i);
*     String type = atts.getType(i);
*     String value = atts.getValue(i);
*     [...]
```

```
*   }
* }
* </pre>
*
* <p>(Note that the result of getLength() will be zero if there
* are no attributes.)
*
* <p>As an alternative, the application can request the
 value or
* type of specific attributes:</p>
*
* <pre>
* public void startElement (String name, AttributeList atts) {
*   String identifier = atts.getValue("id");
*   String label = atts.getValue("label");
*   [...]
* }
* </pre>
*
* @deprecated This interface has been replaced by the SAX2
*            {@link org.xml.sax.Attributes Attributes}
*            interface, which includes Namespace support.
* @since SAX 1.0
* @author David Megginson
* @see org.xml.sax.DocumentHandler#startElement startElement
* @see org.xml.sax.helpers.AttributeListImpl AttributeListImpl
*/

*/
// This class is in the Public Domain. NO WARRANTY!
/**
* Encapsulate Namespace logic for use by applications using SAX,
* or internally by SAX drivers.
*
* <blockquote>

```
* <em>This module, both source code and documentation, is in the
* Public Domain, and comes with <strong>NO WARRANTY</strong>.</em>
* See <a href='http://www.saxproject.org'>http://www.saxproject.org</a>
* for further information.
* </blockquote>
*
* <p>This class encapsulates the logic of Namespace processing: it
* tracks the declarations currently in force for each context and
* automatically processes qualified XML names into their Namespace
* parts; it can also be used in reverse for generating XML qnames
* from Namespaces.</p>
 *
* <p>Namespace support objects are reusable, but the reset method
* must be invoked between each session.</p>
*
* <p>Here is a simple session:</p>
*
* <pre>
* String parts[] = new String[3];
* NamespaceSupport support = new NamespaceSupport();
*
* support.pushContext();
* support.declarePrefix("", "http://www.w3.org/1999/xhtml");
* support.declarePrefix("dc", "http://www.purl.org/dc#");
*
* parts = support.processName("p", parts, false);
* System.out.println("Namespace URI: " + parts[0]);
* System.out.println("Local name: " + parts[1]);
* System.out.println("Raw name: " + parts[2]);
*
* parts = support.processName("dc:title", parts, false);
* System.out.println("Namespace URI: " + parts[0]);
* System.out.println("Local name: " + parts[1]);
* System.out.println("Raw name: " + parts[2]);
*
* support.popContext();
* </pre>
*
* <p>Note that this class is optimized for the use case where most
* elements do not contain Namespace declarations: if the same
 * prefix/URI mapping is repeated for each context (for example), this
* class will be somewhat less efficient.</p>
*
* <p>Although SAX drivers (parsers) may choose to use this class to
* implement namespace handling, they are not required to do so.
* Applications must track namespace information themselves if they
* want to use namespace information.
*
```

* @since SAX 2.0
* @author David Megginson
* @version 2.0.1 (sax2r2)

*/
/**
    * This method creates a new MBeanServer implementation object.
    * When creating a new MBeanServer the
    * {@link javax.management.MBeanServerBuilder} first calls
    * <code>newMBeanServerDelegate()</code> in order to obtain a new
    * {@link javax.management.MBeanServerDelegate} for the new
    * MBeanServer. Then it calls
    * <code>newMBeanServer(defaultDomain,outer,delegate)</code>
    * passing the <var>delegate</var> that should be used by the
    * MBeanServer  implementation.
    * <p>Note that the passed <var>delegate</var> might not be directly the
    * MBeanServerDelegate that was returned by this implementation. It could
    * be, for instance, a new object wrapping the
 previously
    * returned delegate.
    * <p>The <var>outer</var> parameter is a pointer to the MBeanServer that
    * should be passed to the {@link javax.management.MBeanRegistration}
    * interface when registering MBeans inside the MBeanServer.
    * If <var>outer</var> is <code>null</code>, then the MBeanServer
    * implementation is free to use its own <code>this</code> pointer when
    * invoking the {@link javax.management.MBeanRegistration} interface.
    * <p>This makes it possible for a MBeanServer implementation to wrap
    * another MBeanServer implementation, in order to implement, e.g,
```

```
   * security checks, or to prevent access to the actual MBeanServer
   * implementation by returning a pointer to a wrapping object.
   *
   * @param defaultDomain Default domain of the new MBeanServer.
   * @param outer A pointer to the MBeanServer object that must be
   *       passed to the MBeans when invoking their
   *       {@link javax.management.MBeanRegistration}
 interface.
   * @param delegate A pointer to the MBeanServerDelegate associated
   *       with the new MBeanServer. The new MBeanServer must register
   *       this MBean in its MBean repository.
   * @param interceptors If <code>true</code>,
   *       {@link MBeanServerInterceptor}s will be enabled (default is
   *       <code>false</code>).
   *       Note: this parameter is not taken into account by this
   *       implementation - the default value <code>false</code> is
   *       always used.
   * @return A new private implementation of an MBeanServer.
   * @see #interceptorsEnabled
   * @see javax.management.MBeanServerBuilder
   * @see com.sun.jmx.mbeanserver.JmxMBeanServerBuilder

/**
* Interface for associating a SAX event with a document location.
*
* <blockquote>
* <em>This module, both source code and documentation, is in the
* Public Domain, and comes with <strong>NO WARRANTY</strong>.</em>
* See <a href='http://www.saxproject.org'>http://www.saxproject.org</a>
* for further information.
* </blockquote>
*
```

```
* <p>If a SAX parser provides location information to the SAX
* application, it does so by implementing this interface and then
* passing an instance to the application using the content
* handler's {@link org.xml.sax.ContentHandler#setDocumentLocator
* setDocumentLocator} method.  The application can use the
* object to obtain the location of any other SAX event
 * in the XML source document.</p>
*
* <p>Note that the results returned by the object will be valid only
* during the scope of each callback method: the application
* will receive unpredictable results if it attempts to use the
* locator at any other time, or after parsing completes.</p>
*
* <p>SAX parsers are not required to supply a locator, but they are
* very strongly encouraged to do so.  If the parser supplies a
* locator, it must do so before reporting any other document events.
* If no locator has been set by the time the application receives
* the {@link org.xml.sax.ContentHandler#startDocument startDocument}
* event, the application should assume that a locator is not
* available.</p>
*
* @since SAX 1.0
* @author David Megginson
* @see org.xml.sax.ContentHandler#setDocumentLocator
*/

/**
* This interface represents a context in which you can perform
* operations with LDAPv3-style controls and perform LDAPv3-style
* extended operations.
*
* For applications that do not require such controls or extended
* operations, the more generic <tt>javax.naming.directory.DirContext</tt>
* should be used instead.
*
* <h3>Usage Details About Controls</h3>
*
* This interface provides support for LDAP v3 controls.
* At a high level, this support allows a user
* program to set request controls for LDAP operations that are executed
* in the course of the user program's invocation of
* <tt>Context</tt>/<tt>DirContext</tt>
* methods, and read response controls resulting from LDAP operations.
 * At the implementation level, there are some details that developers of
* both the user program and service providers need to understand in order
* to correctly use request and response controls.
*
* <h3>Request Controls</h3>
* <p>
* There are two types of request controls:
* <ul>
* <li>Request controls that affect how a connection is created
* <li>Request controls that affect context methods
* </ul>
*
* The former is used whenever a connection needs to be established or
* re-established with an LDAP server. The latter is used when all other
* LDAP operations are sent to the LDAP server.  The reason why a
* distinction between these two types of request controls is necessary
* is because JNDI is a high-level API that does not deal directly with
* connections.  It is the job of service providers to do any necessary
* connection management. Consequently, a single
* connection may be shared by multiple context instances, and a service provider
* is free to use its own
```

```
 algorithms to conserve connection and network
* usage. Thus, when a method is invoked on the context instance, the service
* provider might need to do some connection management in addition to
* performing the corresponding LDAP operations. For connection management,
* it uses the <em>connection request controls</em>, while for the normal
* LDAP operations, it uses the <em>context request controls</em>.
*<p>Unless explicitly qualified, the term "request controls" refers to
* context request controls.
*
* <h4>Context Request Controls</h4>
* There are two ways in which a context instance gets its request controls:
* <ol>
* <li><tt>ldapContext.newInstance(<strong>reqCtls</strong>)</tt>
* <li><tt>ldapContext.setRequestControls(<strong>reqCtls</strong>)</tt>
* </ol>
* where <tt>ldapContext</tt> is an instance of <tt>LdapContext</tt>.
* Specifying <tt>null</tt> or an empty array for <tt>reqCtls</tt>
* means no request controls.
* <tt>newInstance()</tt> creates a new instance
 of a context using
* <tt>reqCtls</tt>, while <tt>setRequestControls()</tt>
* updates an existing context instance's request controls to <tt>reqCtls</tt>.
* <p>
* Unlike environment properties, request controls of a context instance
* <em>are not inherited</em> by context instances that are derived from
* it.  Derived context instances have <tt>null</tt> as their context
* request controls.  You must set the request controls of a derived context
* instance explicitly using <tt>setRequestControls()</tt>.
* <p>
* A context instance's request controls are retrieved using
* the method <tt>getRequestControls()</tt>.
*
* <h4>Connection Request Controls</h4>
* There are three ways in which connection request controls are set:
* <ol>
* <li><tt>
* new InitialLdapContext(env, <strong>connCtls</strong>)</tt>
* <li><tt>refException.getReferralContext(env, <strong>connCtls</strong>)</tt>
* <li><tt>ldapContext.reconnect(<strong>connCtls</strong>);</tt>
* </ol>
* where <tt>refException</tt>
 is an instance of
* <tt>LdapReferralException</tt>, and <tt>ldapContext</tt> is an
* instance of <tt>LdapContext</tt>.
* Specifying <tt>null</tt> or an empty array for <tt>connCtls</tt>
* means no connection request controls.
* <p>
* Like environment properties, connection request controls of a context
```

```
* <em>are inherited</em> by contexts that are derived from it.
* Typically, you initialize the connection request controls using the
* <tt>InitialLdapContext</tt> constructor or
* <tt>LdapReferralContext.getReferralContext()</tt>. These connection
* request controls are inherited by contexts that share the same
* connection--that is, contexts derived from the initial or referral
* contexts.
* <p>
* Use <tt>reconnect()</tt> to change the connection request controls of
* a context.
* Invoking <tt>ldapContext.reconnect()</tt> affects only the
* connection used by <tt>ldapContext</tt> and any new contexts instances that are
* derived form <tt>ldapContext</tt>.
 Contexts that previously shared the
* connection with <tt>ldapContext</tt> remain unchanged. That is, a context's
* connection request controls must be explicitly changed and is not
* affected by changes to another context's connection request
* controls.
* <p>
* A context instance's connection request controls are retrieved using
* the method <tt>getConnectControls()</tt>.
*
* <h4>Service Provider Requirements</h4>
*
* A service provider supports connection and context request controls
* in the following ways.  Context request controls must be associated on
* a per context instance basis while connection request controls must be
* associated on a per connection instance basis.  The service provider
* must look for the connection request controls in the environment
* property "java.naming.ldap.control.connect" and pass this environment
* property on to context instances that it creates.
*
* <h3>Response Controls</h3>
*
* The method <tt>LdapContext.getResponseControls()</tt>
 is used to
* retrieve the response controls generated by LDAP operations executed
* as the result of invoking a <tt>Context</tt>/<tt>DirContext</tt>
* operation. The result is all of the responses controls generated
* by the underlying LDAP operations, including any implicit reconnection.
* To get only the reconnection response controls,
* use <tt>reconnect()</tt> followed by <tt>getResponseControls()</tt>.
*
* <h3>Parameters</h3>
*
* A <tt>Control[]</tt> array
* passed as a parameter to any method is owned by the caller.
* The service provider will not modify the array or keep a reference to it,
```

* although it may keep references to the individual <tt>Control</tt> objects
* in the array.
* A <tt>Control[]</tt> array returned by any method is immutable, and may
* not subsequently be modified by either the caller or the service provider.
*
* @author Rosanna Lee
* @author Scott Seligman
* @author Vincent Ryan
*
* @see InitialLdapContext
* @see LdapReferralException#getReferralContext(java.util.Hashtable,javax.naming.ldap.Control[])

*/
/**
* This class handles bulk data enciphering/deciphering for each SSLv3
* message.  This provides data confidentiality.  Stream ciphers (such
* as RC4) don't need to do padding; block ciphers (e.g. DES) need it.
*
* Individual instances are obtained by calling the static method
* newCipherBox(), which should only be invoked by BulkCipher.newCipher().
*
* In RFC 2246, with bock ciphers in CBC mode, the Initialization
* Vector (IV) for the first record is generated with the other keys
* and secrets when the security parameters are set.  The IV for
* subsequent records is the last ciphertext block from the previous
* record.
*
* In RFC 4346, the implicit Initialization Vector (IV) is replaced
*
 with an explicit IV to protect against CBC attacks.  RFC 4346
* recommends two algorithms used to generated the per-record IV.
* The implementation uses the algorithm (2)(b), as described at
* section 6.2.3.2 of RFC 4346.
*
* The usage of IV in CBC block cipher can be illustrated in
* the following diagrams.
*
*   (random)
*       R        P1                  IV        C1
*       |        |                   |         |
*  SIV---+   |-----+   |-...          |-----    |------
*       |   |    |   |             |   |   |    |
*    +----+ |  +----+ |           +----+ |  +----+ |

*/
/**
* A single input source for an XML entity.
*
* <blockquote>
* <em>This module, both source code and documentation, is in the
* Public Domain, and comes with <strong>NO WARRANTY</strong>.</em>
* See <a href='http://www.saxproject.org'>http://www.saxproject.org</a>
* for further information.
* </blockquote>
*
* <p>This class allows a SAX application to encapsulate information
* about an input source in a single object, which may include
* a public identifier, a system identifier, a byte stream (possibly
* with a specified encoding), and/or a character stream.</p>
*
* <p>There are two places that the application can deliver an
* input source to the parser: as the argument to the Parser.parse
```

```
 * method, or as the return value of the EntityResolver.resolveEntity
* method.</p>
*
* <p>The SAX parser will use the InputSource object to determine how
* to read XML input.  If there is a character stream available, the
* parser will read that stream directly, disregarding any text
* encoding declaration found in that stream.
* If there is no character stream, but there is
* a byte stream, the parser will use that byte stream, using the
* encoding specified in the InputSource or else (if no encoding is
* specified) autodetecting the character encoding using an algorithm
* such as the one in the XML specification.  If neither a character
* stream nor a
* byte stream is available, the parser will attempt to open a URI
* connection to the resource identified by the system
* identifier.</p>
*
* <p>An InputSource object belongs to the application: the SAX parser
* shall never modify it in any way (it may modify a copy if
* necessary).  However, standard processing of
 both byte and
* character streams is to close them on as part of end-of-parse cleanup,
* so applications should not attempt to re-use such streams after they
* have been handed to a parser.  </p>
*
* @since SAX 1.0

/**
* Interface for associating a SAX event with a document location.
*
* <blockquote>
* <em>This module, both source code and documentation, is in the
* Public Domain, and comes with <strong>NO WARRANTY</strong>.</em>
* See <a href='http://www.saxproject.org'>http://www.saxproject.org</a>
```

```
* for further information.
* </blockquote>
*
* <p>If a SAX parser provides location information to the SAX
* application, it does so by implementing this interface and then
* passing an instance to the application using the content
* handler's {@link org.xml.sax.ContentHandler#setDocumentLocator
* setDocumentLocator} method.  The application can use the
* object to obtain the location of any other SAX event
 * in the XML source document.</p>
*
* <p>Note that the results returned by the object will be valid only
* during the scope of each callback method: the application
* will receive unpredictable results if it attempts to use the
* locator at any other time, or after parsing completes.</p>
*
* <p>SAX parsers are not required to supply a locator, but they are
* very strongly encouraged to do so.  If the parser supplies a
* locator, it must do so before reporting any other document events.
* If no locator has been set by the time the application receives
* the {@link org.xml.sax.ContentHandler#startDocument startDocument}
* event, the application should assume that a locator is not
* available.</p>
*
* @since SAX 1.0
* @author David Megginson
* @see org.xml.sax.ContentHandler#setDocumentLocator
*/

*/
/**
* This class abstracts a number of features for which the Java 2D
* implementation relies on proprietary licensed software libraries.
* Access to those features is now achieved by retrieving the singleton
* instance of this class and calling the appropriate methods on it.
* The 3 primary features abstracted here include:
* <dl>
* <dt>Shape createStrokedShape(Shape, [BasicStroke attributes]);
* <dd>This method implements the functionality of the method of the
* same name on the {@link BasicStroke} class.
* <dt>void strokeTo(Shape, [rendering parameters], PathConsumer2D);
* <dd>This method performs widening of the source path on the fly
* and sends the results to the given {@link PathConsumer2D}
```

```
 object.
* This procedure avoids having to create an intermediate Shape
* object to hold the results of the {@code createStrokedShape} method.
* The main user of this method is the Java 2D non-antialiasing renderer.
* <dt>AATileGenerator getAATileGenerator(Shape, [rendering parameters]);
* <dd>This method returns an object which can iterate over the
* specified bounding box and produce tiles of coverage values for
* antialiased rendering.  The details of the operation of the
* {@link AATileGenerator} object are explained in its class comments.
* </dl>
* Additionally, the following informational method supplies important
* data about the implementation.
* <dl>
* <dt>float getMinimumAAPenSize()
* <dd>This method provides information on how small the BasicStroke
* line width can get before dropouts occur.  Rendering with a BasicStroke
* is defined to never allow the line to have breaks, gaps, or dropouts
* even if the width is set to 0.0f, so this information allows the
 * {@link SunGraphics2D} class to detect the "thin line" case and set
* the rendering attributes accordingly.
* </dl>
* At startup the runtime will load a single instance of this class.
* It searches the classpath for a registered provider of this API
* and returns either the last one it finds, or the instance whose
* class name matches the value supplied in the System property
* {@code sun.java2d.renderer}.
* Additionally, a runtime System property flag can be set to trace
* all calls to methods on the {@code RenderingEngine} in use by
* setting the sun.java2d.renderer.trace property to any non-null value.
* <p>
* Parts of the system that need to use any of the above features should
* call {@code RenderingEngine.getInstance()} to obtain the properly
* registered (and possibly trace-enabled) version of the RenderingEngine.
*/

```
* or visit www.oracle.com if you need additional information or have any
* questions.
*/
/*
   * If QOP is set to 'auth-conf', a DIGEST-MD5 mechanism must have
   * support for the DES and Triple DES cipher algorithms (optionally,
   * support for RC4 [128/56/40 bit keys] ciphers) to provide for
   * confidentiality. See RFC 2831 for details. This implementation
   * provides support for DES, Triple DES and RC4 ciphers.
   *
   * The value of strength effects the strength of cipher used. The mappings
   * of 'high', 'medium', and 'low' give the following behaviour.
   *
   *  HIGH_STRENGTH   - Triple DES
   *                  - RC4 (128bit)
   *  MEDIUM_STRENGTH - DES
   *                  - RC4 (56bit)
   *  LOW_SRENGTH     - RC4 (40bit)
   */
/**
   * Implementation
 of the SecurityCtx interface allowing for messages
   * between the client and server to be integrity checked and encrypted.
   * After a successful DIGEST-MD5 authentication, privacy is invoked if the
   * SASL QOP (quality-of-protection) is set to 'auth-conf'.
   * <p>
   * Further details on the integrity-protection mechanism can be found
   * at section 2.4 - Confidentiality protection in
   * <a href="http://www.ietf.org/rfc/rfc2831.txt">RFC2831</a> definition.
   *
   * @author Jonathan Bruce

/**
* Factory for creating an XML reader.
*
* <blockquote>
* This module, both source code and documentation, is in the
* Public Domain, and comes with NO WARRANTY.
* See http://www.saxproject.org
* for further information.

```
* </blockquote>
*
* <p>This class contains static methods for creating an XML reader
* from an explicit class name, or based on runtime defaults:</p>
*
* <pre>
* try {
*   XMLReader myReader = XMLReaderFactory.createXMLReader();
* } catch (SAXException e) {
*   System.err.println(e.getMessage());
* }
* </pre>
*
* <p><strong>Note to Distributions bundled
 with parsers:</strong>
* You should modify the implementation of the no-arguments
* <em>createXMLReader</em> to handle cases where the external
* configuration mechanisms aren't set up.  That method should do its
* best to return a parser when one is in the class path, even when
* nothing bound its class name to <code>org.xml.sax.driver</code> so
* those configuration mechanisms would see it.</p>
*
* @since SAX 2.0
* @author David Megginson, David Brownell
* @version 2.0.1 (sax2r2)

*/
/**
    * Returns a name for the given time zone ID that's suitable for
    * presentation to the user in the specified locale. The given time
    * zone ID is "GMT" or one of the names defined using "Zone" entries
    * in the "tz database", a public domain time zone database at
    * <a href="ftp://elsie.nci.nih.gov/pub/">ftp://elsie.nci.nih.gov/pub/</a>.
    * The data of this database is contained in a file whose name starts with
    * "tzdata", and the specification of the data format is part of the zic.8
    * man page, which is contained in a file whose name starts with "tzcode".
    * <p>
    * If <code>daylight</code> is true, the method should return a name
    * appropriate for daylight
 saving time even if the specified time zone
    * has not observed daylight saving time in the past.
    *
    * @param ID a time zone ID string
    * @param daylight if true, return the daylight saving name.
    * @param style either {@link java.util.TimeZone#LONG TimeZone.LONG} or
    *    {@link java.util.TimeZone#SHORT TimeZone.SHORT}
    * @param locale the desired locale
    * @return the human-readable name of the given time zone in the
    *     given locale, or null if it's not available.
    * @exception IllegalArgumentException if <code>style</code> is invalid,
    *     or <code>locale</code> isn't one of the locales returned from
    *     {@link java.util.spi.LocaleServiceProvider#getAvailableLocales()
    *     getAvailableLocales()}.
    * @exception NullPointerException if <code>ID</code> or <code>locale</code>
    *     is null
    * @see java.util.TimeZone#getDisplayName(boolean, int, java.util.Locale)
    */

*/
// NO WARRANTY!  This class is in the public domain.
/**
* Default implementation of the Attributes interface.
*
* <blockquote>
* <em>This module, both source code and documentation, is in the
* Public Domain, and comes with <strong>NO WARRANTY</strong>.</em>
* </blockquote>
*
* <p>This class provides a default implementation of the SAX2
```

```
* {@link org.xml.sax.Attributes Attributes} interface, with the
* addition of manipulators so that the list can be modified or
* reused.</p>
*
* <p>There are two typical uses of this class:</p>
*
* <ol>
* <li>to take a persistent snapshot of an Attributes object
*  in a {@link org.xml.sax.ContentHandler#startElement startElement} event; or</li>
* <li>to construct
 or modify an Attributes object in a SAX2 driver or filter.</li>
* </ol>
*
* <p>This class replaces the now-deprecated SAX1 {@link
* org.xml.sax.helpers.AttributeListImpl AttributeListImpl}
* class; in addition to supporting the updated Attributes
* interface rather than the deprecated {@link org.xml.sax.AttributeList
* AttributeList} interface, it also includes a much more efficient
* implementation using a single array rather than a set of Vectors.</p>
*
* @since SAX 2.0
* @author David Megginson,
*        <a href="mailto:sax@megginson.com">sax@megginson.com</a>
* @version 2.0
*/

*/
/**
 * DOM Level 3 LS CR - Experimental.
 * Create a new <code>LSParser</code>. The newly constructed parser may
 * then be configured by means of its <code>DOMConfiguration</code>
 * object, and used to parse documents by means of its <code>parse</code>
 * method.
 * @param mode
 The <code>mode</code> argument is either
 * <code>MODE_SYNCHRONOUS</code> or <code>MODE_ASYNCHRONOUS</code>, if

```
    *   <code>mode</code> is <code>MODE_SYNCHRONOUS</code> then the
    *   <code>LSParser</code> that is created will operate in synchronous
    *   mode, if it's <code>MODE_ASYNCHRONOUS</code> then the
    *   <code>LSParser</code> that is created will operate in asynchronous
    *   mode.
    * @param schemaType  An absolute URI representing the type of the schema
    *   language used during the load of a <code>Document</code> using the
    *   newly created <code>LSParser</code>. Note that no lexical checking
    *   is done on the absolute URI. In order to create a
    *   <code>LSParser</code> for any kind of schema types (i.e. the
    *   LSParser will be free to use any schema found), use the value
    *   <code>null</code>.
    * <p ><b>Note:</b>    For W3C XML Schema [<a href='http://www.w3.org/TR/2001/REC-xmlschema-1-
20010502/'>XML Schema Part
 1</a>]
    *   , applications must use the value
    *   <code>"http://www.w3.org/2001/XMLSchema"</code>. For XML DTD [<a
href='http://www.w3.org/TR/2000/REC-xml-20001006'>XML 1.0</a>],
    *   applications must use the value
    *   <code>"http://www.w3.org/TR/REC-xml"</code>. Other Schema languages
    *   are outside the scope of the W3C and therefore should recommend an
    *   absolute URI in order to use this method.
    * @return  The newly created <code>LSParser</code> object. This
    *   <code>LSParser</code> is either synchronous or asynchronous
    *   depending on the value of the <code>mode</code> argument.
    * <p ><b>Note:</b>    By default, the newly created <code>LSParser</code>
    *    does not contain a <code>DOMErrorHandler</code>, i.e. the value of
    *   the "<a href='http://www.w3.org/TR/2003/WD-DOM-Level-3-Core-20030609/core.html#parameter-error-
handler'>
    *   error-handler</a>" configuration parameter is <code>null</code>. However, implementations
     *   may provide a default error handler at creation time. In that case,
    *   the initial value of the <code>"error-handler"</code> configuration
    *   parameter on the new created <code>LSParser</code> contains a
    *   reference to the default error handler.
    * @exception DOMException
    *    NOT_SUPPORTED_ERR: Raised if the requested mode or schema type is
    *   not supported.
        */

*/
/**
* Basic interface for resolving entities.
*
* <blockquote>
* This module, both source code and documentation, is in the
* Public Domain, and comes with NO WARRANTY.

```
* See <a href='http://www.saxproject.org'>http://www.saxproject.org</a>
* for further information.
* </blockquote>
*
* <p>If a SAX application needs to implement customized handling
* for external entities, it must implement this interface and
* register an instance with the SAX driver using the
* {@link org.xml.sax.XMLReader#setEntityResolver setEntityResolver}
* method.</p>
*
* <p>The XML reader will then allow the application to intercept any
* external entities (including the external DTD subset
 and external
* parameter entities, if any) before including them.</p>
*
* <p>Many SAX applications will not need to implement this interface,
* but it will be especially useful for applications that build
* XML documents from databases or other specialized input sources,
* or for applications that use URI types other than URLs.</p>
*
* <p>The following resolver would provide the application
* with a special character stream for the entity with the system
* identifier "http://www.myhost.com/today":</p>
*
* <pre>
* import org.xml.sax.EntityResolver;
* import org.xml.sax.InputSource;
*
* public class MyResolver implements EntityResolver {
*   public InputSource resolveEntity (String publicId, String systemId)
*   {
*     if (systemId.equals("http://www.myhost.com/today")) {
*             // return a special input source
*       MyReader reader = new MyReader();
*       return new InputSource(reader);
*     } else {
*             // use the default behaviour
*
    return null;
*     }
*   }
* }
* </pre>
*
* <p>The application can also use this interface to redirect system
* identifiers to local URIs or to look up replacements in a catalog
* (possibly by using the public identifier).</p>
*
```

```
* @since SAX 1.0
* @author David Megginson
* @see org.xml.sax.XMLReader#setEntityResolver
* @see org.xml.sax.InputSource
*/

*/
/**
* This class enables a programmer to create an object and protect its

```
* confidentiality with a cryptographic algorithm.
*
* <p> Given any Serializable object, one can create a SealedObject
* that encapsulates the original object, in serialized
* format (i.e., a "deep copy"), and seals (encrypts) its serialized contents,
* using a cryptographic algorithm such as AES, to protect its
* confidentiality.  The encrypted content can later be decrypted (with
* the corresponding algorithm using the correct decryption key) and
* de-serialized, yielding the original object.
*
* <p> Note that the Cipher object must be fully initialized with the
* correct algorithm, key, padding scheme, etc., before being
 applied
* to a SealedObject.
*
* <p> The original object that was sealed can be recovered in two different
* ways:
*
* <ul>
*
* <li>by using the {@link #getObject(javax.crypto.Cipher) getObject}
* method that takes a <code>Cipher</code> object.
*
* <p> This method requires a fully initialized <code>Cipher</code> object,
* initialized with the
* exact same algorithm, key, padding scheme, etc., that were used to seal the
* object.
*
* <p> This approach has the advantage that the party who unseals the
* sealed object does not require knowledge of the decryption key. For example,
* after one party has initialized the cipher object with the required
* decryption key, it could hand over the cipher object to
* another party who then unseals the sealed object.
*
* <li>by using one of the
* {@link #getObject(java.security.Key) getObject} methods
* that take a <code>Key</code> object.
*
* <p> In this approach, the <code>getObject</code> method creates a cipher
* object
 for the appropriate decryption algorithm and initializes it with the
* given decryption key and the algorithm parameters (if any) that were stored
* in the sealed object.
*
* <p> This approach has the advantage that the party who
* unseals the object does not need to keep track of the parameters (e.g., an
* IV) that were used to seal the object.
*
```

/**
* Represents OASIS Open Catalog files.
 *
* <p>This class implements the semantics of OASIS Open Catalog files
* (defined by
* <a href="http://www.oasis-open.org/html/a401.htm">OASIS Technical
* Resolution 9401:1997 (Amendment 2 to TR 9401)</a>).</p>
*
* <p>The primary purpose of the Catalog is to associate resources in the
* document with local system identifiers. Some entities
* (document types, XML entities, and notations) have names and all of them
* can have either public or system identifiers or both. (In XML, only a
* notation can have a public identifier without a system identifier, but
* the methods implemented in this class obey the Catalog semantics
* from the SGML
* days when system identifiers were optional.)</p>
*
```

```
* <p>The system identifiers returned by the resolution methods in this
* class are valid, i.e. usable by, and in fact constructed by, the
* <tt>java.net.URL</tt> class. Unfortunately, this class seems to behave in
* somewhat non-standard ways and the system identifiers returned may
 * not be directly usable in a browser or filesystem context.
*
* <p>This class recognizes all of the Catalog entries defined in
* TR9401:1997:</p>
*
* <ul>
* <li><b>BASE</b>
* changes the base URI for resolving relative system identifiers. The
* initial base URI is the URI of the location of the catalog (which is,
* in turn, relative to the location of the current working directory
* at startup, as returned by the <tt>user.dir</tt> system property).</li>
* <li><b>CATALOG</b>
* processes other catalog files. An included catalog occurs logically
* at the end of the including catalog.</li>
* <li><b>DELEGATE_PUBLIC</b>
* specifies alternate catalogs for some public identifiers. The delegated
* catalogs are not loaded until they are needed, but they are cached
* once loaded.</li>
* <li><b>DELEGATE_SYSTEM</b>
* specifies alternate catalogs for some system identifiers. The delegated
* catalogs are not loaded until they are needed, but they are cached
* once loaded.</li>
 * <li><b>DELEGATE_URI</b>
* specifies alternate catalogs for some URIs. The delegated
* catalogs are not loaded until they are needed, but they are cached
* once loaded.</li>
* <li><b>REWRITE_SYSTEM</b>
* specifies alternate prefix for a system identifier.</li>
* <li><b>REWRITE_URI</b>
* specifies alternate prefix for a URI.</li>
* <li><b>SYSTEM_SUFFIX</b>
* maps any system identifier that ends with a particular suffix to another
* system identifier.</li>
* <li><b>URI_SUFFIX</b>
* maps any URI that ends with a particular suffix to another URI.</li>
* <li><b>DOCTYPE</b>
* associates the names of root elements with URIs. (In other words, an XML
* processor might infer the doctype of an XML document that does not include
* a doctype declaration by looking for the DOCTYPE entry in the
* catalog which matches the name of the root element of the document.)</li>
* <li><b>DOCUMENT</b>
* provides a default document.</li>
* <li><b>DTDDECL</b>
* recognized and silently ignored.
```

```
 Not relevant for XML.</li>
* <li><b>ENTITY</b>
* associates entity names with URIs.</li>
* <li><b>LINKTYPE</b>
* recognized and silently ignored. Not relevant for XML.</li>
* <li><b>NOTATION</b>
* associates notation names with URIs.</li>
* <li><b>OVERRIDE</b>
* changes the override behavior. Initial behavior is set by the
* system property <tt>xml.catalog.override</tt>. The default initial
* behavior is 'YES', that is, entries in the catalog override
* system identifiers specified in the document.</li>
* <li><b>PUBLIC</b>
* maps a public identifier to a system identifier.</li>
* <li><b>SGMLDECL</b>
* recognized and silently ignored. Not relevant for XML.</li>
* <li><b>SYSTEM</b>
* maps a system identifier to another system identifier.</li>
* <li><b>URI</b>
* maps a URI to another URI.</li>
* </ul>
*
* <p>Note that BASE entries are treated as described by RFC2396. In
* particular, this has the counter-intuitive property that after a BASE
* entry identifing
 "http://example.com/a/b/c" as the base URI,
* the relative URI "foo" is resolved to the absolute URI
* "http://example.com/a/b/foo". You must provide the trailing slash if
* you do not want the final component of the path to be discarded as a
* filename would in a URI for a resource: "http://example.com/a/b/c/".
* </p>
*
* <p>Note that subordinate catalogs (all catalogs except the first,
* including CATALOG and DELEGATE* catalogs) are only loaded if and when
* they are required.</p>
*
* <p>This class relies on classes which implement the CatalogReader
* interface to actually load catalog files. This allows the catalog
* semantics to be implemented for TR9401 text-based catalogs, XML
* catalogs, or any number of other storage formats.</p>
*
* <p>Additional catalogs may also be loaded with the
* {@link #parseCatalog} method.</p>
* </dd>
* </dl>
*
* <p><b>Change Log:</b></p>
* <dl>
```

```
* <dt>2.0</dt>
* <dd><p>Rewrite to use CatalogReaders.</p></dd>
* <dt>1.1</dt>
*
 <dd><p>Allow quoted components in <tt>xml.catalog.files</tt>
* so that URLs containing colons can be used on Unix.
* The string passed to <tt>xml.catalog.files</tt> can now have the form:</p>
* <pre>
* unquoted-path-with-no-sep-chars:"double-quoted path with or without sep chars":'single-quoted path with or
without sep chars'
* </pre>
* <p>(Where ":" is the separater character in this example.)</p>
* <p>If an unquoted path contains an embedded double or single quote
* character, no special processig is performed on that character. No
* path can contain separater characters, double, and single quotes
* simultaneously.</p>
* <p>Fix bug in calculation of BASE entries: if
* a catalog contains multiple BASE entries, each is relative to the preceding
* base, not the default base URI of the catalog.</p>
* </dd>
* <dt>1.0.1</dt>
* <dd><p>Fixed a bug in the calculation of the list of subordinate catalogs.
* This bug caused an infinite loop where parsing would alternately process
 * two catalogs indefinitely.</p>
* </dd>
* </dl>
*
* @see CatalogReader
* @see CatalogEntry

/**
* SAX2 extension to augment the per-attribute information
* provided though {@link Attributes}.
* If an implementation supports this extension, the attributes
* provided in {@link org.xml.sax.ContentHandler#startElement
* ContentHandler.startElement() } will implement this interface,
* and the <em>http://xml.org/sax/features/use-attributes2</em>
* feature flag will have the value <em>true</em>.
*
* <blockquote>
* <em>This module, both source code and documentation, is in the
* Public Domain, and comes with <strong>NO WARRANTY</strong>.</em>
* </blockquote>
*
* <p> XMLReader implementations are not required to support this
* information, and it is not part of
 core-only SAX2 distributions.</p>
*
* <p>Note that if an attribute was defaulted (<em>!isSpecified()</em>)
* it will of necessity also have been declared (<em>isDeclared()</em>)
* in the DTD.
* Similarly if an attribute's type is anything except CDATA, then it
* must have been declared.
* </p>
*
* @since SAX 2.0 (extensions 1.1 alpha)
```

*/
/**
    * Returns the permissions for the given codesource object.
    * The implementation of this method first calls super.getPermissions,
    * to get the permissions
    * granted by the super class, and then adds additional permissions
    * based on the URL of the codesource.
    * <p>
    * If the protocol is "file"
    * and the path specifies a file, permission is granted to read all files
    * and (recursively) all files and subdirectories contained in
    * that directory. This is so applets with a codebase of
    * file:/blah/some.jar can read in file:/blah/, which is needed to
    * be backward compatible. We also add permission to connect back to
    * the "localhost".
    *

  * @param codesource the codesource
    * @throws NullPointerException if {@code codesource} is {@code null}.
    * @return the permissions granted to the codesource
    */

/**
	* Checks if the ID/IDREF semantics is associated with this
	* datatype.
	*
	* <p>
	* This method is introduced to support the RELAX NG DTD
	* compatibility spec. (Of course it's always free to use
	* this method for other purposes.)
	 *
	* <p>
	* If you are implementing a datatype library and have no idea about
	* the "RELAX NG DTD compatibility" thing, just return
	* <code>ID_TYPE_NULL</code> is fine.
	*
	* @return
	*		If this datatype doesn't have any ID/IDREF semantics,
	*		it returns {@link #ID_TYPE_NULL}. If it has such a semantics
	*		(for example, XSD:ID, XSD:IDREF and comp:ID type), then
	*		it returns {@link #ID_TYPE_ID}, {@link #ID_TYPE_IDREF} or
	*		{@link #ID_TYPE_IDREFS}.
	*/

/**
* Default implementation for AttributeList.
*
* <blockquote>
* <em>This module, both source code and documentation, is in the
* Public Domain, and comes with <strong>NO WARRANTY</strong>.</em>
* See <a href='http://www.saxproject.org'>http://www.saxproject.org</a>
* for further information.
* </blockquote>
*
* <p>AttributeList implements the deprecated SAX1 {@link
* org.xml.sax.AttributeList AttributeList} interface, and has been
* replaced by the new SAX2 {@link org.xml.sax.helpers.AttributesImpl
* AttributesImpl} interface.</p>
*
* <p>This class provides a convenience implementation of the SAX
* {@link org.xml.sax.AttributeList AttributeList} interface.  This
* implementation is useful
 both for SAX parser writers, who can use
* it to provide attributes to the application, and for SAX application
* writers, who can use it to create a persistent copy of an element's
* attribute specifications:</p>
*
* <pre>
* private AttributeList myatts;
*
* public void startElement (String name, AttributeList atts)
* {
*             // create a persistent copy of the attribute list
*             // for use outside this method
*   myatts = new AttributeListImpl(atts);
*   [...]
* }
* </pre>
*
* <p>Please note that SAX parsers are not required to use this
* class to provide an implementation of AttributeList; it is
* supplied only as an optional convenience.  In particular,
* parser writers are encouraged to invent more efficient
```

```
* implementations.</p>
*
* @deprecated This class implements a deprecated interface,
*            {@link org.xml.sax.AttributeList AttributeList};
*            that interface has been replaced by
*            {@link org.xml.sax.Attributes
 Attributes},
*            which is implemented in the
*            {@link org.xml.sax.helpers.AttributesImpl
*           AttributesImpl} helper class.
* @since SAX 1.0
* @author David Megginson
* @see org.xml.sax.AttributeList
* @see org.xml.sax.DocumentHandler#startElement
*/

/**
    * Returns an array containing all of the elements in this collection.
    * If this collection makes any guarantees as to what order its elements
    * are returned by its iterator, this method must return the elements in
    * the same order.
    *
    * <p>The returned array will be "safe" in that no references to it are
    * maintained by this collection.  (In other words, this method must
    * allocate a new array even if this collection is backed by an array).
    * The caller is thus free to modify the returned array.
    *
    * <p>This method acts as bridge between array-based and collection-based
    * APIs.
    *
    * @return an array containing all of the elements in this
 collection
    */

*/
/**
* <code>DateFormatSymbols</code> is a public class for encapsulating
* localizable date-time formatting data, such as the names of the
* months, the names
 of the days of the week, and the time zone data.
* <code>SimpleDateFormat</code> uses
* <code>DateFormatSymbols</code> to encapsulate this information.
*
* <p>
* Typically you shouldn't use <code>DateFormatSymbols</code> directly.
* Rather, you are encouraged to create a date-time formatter with the
* <code>DateFormat</code> class's factory methods: <code>getTimeInstance</code>,
* <code>getDateInstance</code>, or <code>getDateTimeInstance</code>.
```

```
* These methods automatically create a <code>DateFormatSymbols</code> for
* the formatter so that you don't have to. After the
* formatter is created, you may modify its format pattern using the
* <code>setPattern</code> method. For more information about
* creating formatters using <code>DateFormat</code>'s factory methods,
* see {@link DateFormat}.
*
* <p>
* If you decide to create a date-time formatter with a specific
* format pattern for a specific locale, you can do so with:
* <blockquote>
* <pre>
* new SimpleDateFormat(aPattern,
 DateFormatSymbols.getInstance(aLocale)).
* </pre>
* </blockquote>
*
* <p>
* <code>DateFormatSymbols</code> objects are cloneable. When you obtain
* a <code>DateFormatSymbols</code> object, feel free to modify the
* date-time formatting data. For instance, you can replace the localized
* date-time format pattern characters with the ones that you feel easy
* to remember. Or you can change the representative cities
* to your favorite ones.
*
* <p>
* New <code>DateFormatSymbols</code> subclasses may be added to support
* <code>SimpleDateFormat</code> for date-time formatting for additional locales.

* @see         DateFormat
* @see         SimpleDateFormat
* @see         java.util.SimpleTimeZone
* @author      Chen-Lieh Huang

*/
/**
* This interface encapsulates the GSS-API security context and provides
* the security services that are available over the context.  Security
* contexts are established between peers using locally acquired
* credentials.  Multiple contexts may exist simultaneously between a pair
* of peers, using the same or different set of credentials.  GSS-API
* functions in a manner independent of the underlying transport protocol
* and depends on its calling application to transport the tokens that are
* generated by the security context between the peers.<p>
*
* If the caller instantiates the context using the default
* <code>GSSManager</code> instance, then the Kerberos v5 GSS-API mechanism
* is guaranteed
 to be available for context establishment. This mechanism
* is identified by the Oid "1.2.840.113554.1.2.2" and is defined in RFC
* 1964.<p>
*
* Before the context establishment phase is initiated, the context
* initiator may request specific characteristics desired of the
* established context. Not all underlying mechanisms support all
* characteristics that a caller might desire. After the context is
* established, the caller can check the actual characteristics and services
* offered by that context by means of various query methods. When using
* the Kerberos v5 GSS-API mechanism offered by the default
* <code>GSSManager</code> instance, all optional services will be
* available locally. They are mutual authentication, credential
* delegation, confidentiality and integrity protection, and per-message
* replay detection and sequencing. Note that in the GSS-API, message integrity
* is a prerequisite for message confidentiality.<p>
*
* The context establishment occurs
 in a loop where the
* initiator calls {@link #initSecContext(byte[], int, int) initSecContext}
* and the acceptor calls {@link #acceptSecContext(byte[], int, int)
* acceptSecContext} until the context is established. While in this loop
* the <code>initSecContext</code> and <code>acceptSecContext</code>
* methods produce tokens that the application sends over to the peer. The
* peer passes any such token as input to its <code>acceptSecContext</code>
* or <code>initSecContext</code> as the case may be.<p>
*
* During the context establishment phase, the {@link
```

```
* #isProtReady() isProtReady} method may be called to determine if the
* context can be used for the per-message operations of {@link
* #wrap(byte[], int, int, MessageProp) wrap} and {@link #getMIC(byte[],
* int, int, MessageProp) getMIC}.  This allows applications to use
* per-message operations on contexts which aren't yet fully
* established.<p>
*
* After the context has been established or the <code>isProtReady</code>
 * method returns <code>true</code>, the query routines can be invoked to
* determine the actual characteristics and services of the established
* context.  The application can also start using the per-message methods
* of {@link #wrap(byte[], int, int, MessageProp) wrap} and
* {@link #getMIC(byte[], int, int, MessageProp) getMIC} to obtain
* cryptographic operations on application supplied data.<p>
*
* When the context is no longer needed, the application should call
* {@link #dispose() dispose} to release any system resources the context
* may be using.<p>
*
* A security context typically maintains sequencing and replay detection
* information about the tokens it processes. Therefore, the sequence in
* which any tokens are presented to this context for processing can be
* important. Also note that none of the methods in this interface are
* synchronized. Therefore, it is not advisable to share a
* <code>GSSContext</code> among several threads unless some
 application
* level synchronization is in place.<p>
*
* Finally, different mechanism providers might place different security
* restrictions on using GSS-API contexts. These will be documented by the
* mechanism provider. The application will need to ensure that it has the
* appropriate permissions if such checks are made in the mechanism layer.<p>
*
* The example code presented below demonstrates the usage of the
* <code>GSSContext</code> interface for the initiating peer.  Different
* operations on the <code>GSSContext</code> object are presented,
* including: object instantiation, setting of desired flags, context
* establishment, query of actual context flags, per-message operations on
* application data, and finally context deletion.<p>
*
* <pre>
*    // Create a context using default credentials
*    // and the implementation specific default mechanism
*    GSSManager manager ...
*    GSSName targetName ...
*    GSSContext context = manager.createContext(targetName,
 null, null,
*                                   GSSContext.INDEFINITE_LIFETIME);
```

```
*
*    // set desired context options prior to context establishment
*    context.requestConf(true);
*    context.requestMutualAuth(true);
*    context.requestReplayDet(true);
*    context.requestSequenceDet(true);
*
*    // establish a context between peers
*
*    byte []inToken = new byte[0];
*
*    // Loop while there still is a token to be processed
*
*    while (!context.isEstablished()) {
*
*       byte[] outToken
*          = context.initSecContext(inToken, 0, inToken.length);
*
*       // send the output token if generated
*       if (outToken != null)
*          sendToken(outToken);
*
*       if (!context.isEstablished()) {
*          inToken = readToken();
*    }
*
*     // display context information
*     System.out.println("Remaining lifetime in seconds = "
*                                + context.getLifetime());
*     System.out.println("Context
 mechanism = " + context.getMech());
*     System.out.println("Initiator = " + context.getSrcName());
*     System.out.println("Acceptor = " + context.getTargName());
*
*     if (context.getConfState())
*           System.out.println("Confidentiality (i.e., privacy) is available");
*
*     if (context.getIntegState())
*           System.out.println("Integrity is available");
*
*     // perform wrap on an application supplied message, appMsg,
*     // using QOP = 0, and requesting privacy service
*     byte [] appMsg ...
*
*     MessageProp mProp = new MessageProp(0, true);
*
*     byte []tok = context.wrap(appMsg, 0, appMsg.length, mProp);
*
```

```
*     sendToken(tok);
*
*     // release the local-end of the context
*     context.dispose();
*
* </pre>

* @since 1.4
*/
/**
   * Applies per-message security services over the established security
   * context. The method will return a token with the
   * application
 supplied data and a cryptographic MIC over it.
   * The data may be encrypted if confidentiality (privacy) was
   * requested.<p>
   *
   * The MessageProp object is instantiated by the application and used
   * to specify a QOP value which selects cryptographic algorithms, and a
   * privacy service to optionally encrypt the message.  The underlying
   * mechanism that is used in the call may not be able to provide the
   * privacy service.  It sets the actual privacy service that it does
   * provide in this MessageProp object which the caller should then
   * query upon return.  If the mechanism is not able to provide the
   * requested QOP, it throws a GSSException with the BAD_QOP code.<p>
   *
   * Since some application-level protocols may wish to use tokens
   * emitted by wrap to provide "secure framing", implementations should
   * support the wrapping of zero-length messages.<p>
   *
   * The application will be responsible for sending
 the token to the
   * peer.
   *
   * @param inBuf application data to be protected.
   * @param offset the offset within the inBuf where the data begins.
   * @param len the length of the data
   * @param msgProp instance of MessageProp that is used by the
   * application to set the desired QOP and privacy state. Set the
   * desired QOP to 0 to request the default QOP. Upon return from this
   * method, this object will contain the the actual privacy state that
   * was applied to the message by the underlying mechanism.
   * @return a byte[] containing the token to be sent to the peer.
   *
   * @throws GSSException containing the following major error codes:
   *   {@link GSSException#CONTEXT_EXPIRED GSSException.CONTEXT_EXPIRED},
   *   {@link GSSException#BAD_QOP GSSException.BAD_QOP},
```

```
    *   {@link GSSException#FAILURE GSSException.FAILURE}
    */
/**
    * Used to process tokens generated by the <code>wrap</code> method on
    * the other side
 of the context. The method will return the message
    * supplied by the peer application to its wrap call, while at the same
    * time verifying the embedded MIC for that message.<p>
    *
    * The MessageProp object is instantiated by the application and is
    * used by the underlying mechanism to return information to the caller
    * such as the QOP, whether confidentiality was applied to the message,
    * and other supplementary message state information.<p>
    *
    * Since some application-level protocols may wish to use tokens
    * emitted by wrap to provide "secure framing", implementations should
    * support the wrapping and unwrapping of zero-length messages.<p>
    *
    * @param inBuf a byte array containing the wrap token received from
    * peer.
    * @param offset the offset where the token begins.
    * @param len the length of the token
    * @param msgProp upon return from the method, this object will contain
    * the applied QOP, the privacy
 state of the message, and supplementary
    * information stating if the token was a duplicate, old, out of
    * sequence or arriving after a gap.
    * @return a byte[] containing the message unwrapped from the input
    * token.
    *

*/
/**
* Receive notification of general document events.
*
* <blockquote>
* <em>This module, both source code and documentation, is in the
* Public Domain, and comes with <strong>NO WARRANTY</strong>.</em>
* See <a href='http://www.saxproject.org'>http://www.saxproject.org</a>
* for further information.
* </blockquote>
*
* <p>This was the main event-handling interface for SAX1; in
* SAX2, it has been replaced by {@link org.xml.sax.ContentHandler
```

```
* ContentHandler}, which provides Namespace support and reporting
* of skipped entities.  This interface is included in SAX2 only
* to support legacy SAX1 applications.</p>
*
* <p>The order of events in this interface is very important, and
* mirrors the
 order of information in the document itself.  For
* example, all of an element's content (character data, processing
* instructions, and/or subelements) will appear, in order, between
* the startElement event and the corresponding endElement event.</p>
*
* <p>Application writers who do not want to implement the entire
* interface can derive a class from HandlerBase, which implements
* the default functionality; parser writers can instantiate
* HandlerBase to obtain a default handler.  The application can find
* the location of any document event using the Locator interface
* supplied by the Parser through the setDocumentLocator method.</p>
*
* @deprecated This interface has been replaced by the SAX2
*            {@link org.xml.sax.ContentHandler ContentHandler}
*            interface, which includes Namespace support.
* @since SAX 1.0
* @author David Megginson
* @see org.xml.sax.Parser#setDocumentHandler
* @see org.xml.sax.Locator
* @see org.xml.sax.HandlerBase

/**
* Defines an abstract implementation of a factory for
* getting XMLEventWriters and XMLStreamWriters.
*
* The following table defines the standard properties of this specification.
* Each property varies in the level of support required by each implementation.
* The level of support required is described in the 'Required' column.
*
*     <table border="2" rules="all" cellpadding="4">
*     <thead>
```

```
*      <tr>
*        <th align="center" colspan="2">
*          Configuration parameters
*        </th>
*      </tr>
*    </thead>
*    <tbody>
*      <tr>
*        <th>Property Name</th>
*        <th>Behavior</th>
*        <th>Return type</th>
*        <th>Default Value</th>
*        <th>Required</th>
 *             </tr>
*         <tr><td>javax.xml.stream.isRepairingNamespaces</td><td>defaults prefixes on the output
side</td><td>Boolean</td><td>False</td><td>Yes</td></tr>
*      </tbody>
*   </table>
*
* <p>The following paragraphs describe the namespace and prefix repair algorithm:</p>
*
* <p>The property can be set with the following code line:
* <code>setProperty("javax.xml.stream.isRepairingNamespaces",new Boolean(true|false));</code></p>
*
* <p>This property specifies that the writer default namespace prefix declarations.
* The default value is false. </p>
*
* <p>If a writer isRepairingNamespaces it will create a namespace declaration
* on the current StartElement for
* any attribute that does not
* currently have a namespace declaration in scope.  If the StartElement
* has a uri but no prefix specified a prefix will be assigned, if the prefix
* has not been declared in a parent of the current StartElement it will be declared
* on the current
 StartElement.  If the defaultNamespace is bound and in scope
* and the default namespace matches the URI of the attribute or StartElement
* QName no prefix will be assigned.</p>
*
* <p>If an element or attribute name has a prefix, but is not
* bound to any namespace URI, then the prefix will be removed
* during serialization.</p>
*
* <p>If element and/or attribute names in the same start or
* empty-element tag are bound to different namespace URIs and
* are using the same prefix then the element or the first
* occurring attribute retains the original prefix and the
* following attributes have their prefixes replaced with a
* new prefix that is bound to the namespace URIs of those
```

* attributes.
*
* If an element or attribute name uses a prefix that is
* bound to a different URI than that inherited from the
* namespace context of the parent of that element and there
* is no namespace declaration in the context of the current
* element then such a namespace declaration
 is added.
*
* If an element or attribute name is bound to a prefix and
* there is a namespace declaration that binds that prefix
* to a different URI then that namespace declaration is
* either removed if the correct mapping is inherited from
* the parent context of that element, or changed to the
* namespace URI of the element or attribute using that prefix.

/**
  * Returns an array containing all of the elements in this queue, in
  * proper sequence.
  *
  * <p>The returned array will be "safe" in that no references to it are
  * maintained by this queue. (In other words, this method must allocate
  * a new array). The caller is thus free to modify the returned array.
  *
  * <p>This
 method acts as bridge between array-based and collection-based
  * APIs.
  *
  * @return an array containing all of the elements in this queue
  */

/**
* Encapsulate an XML parse error or warning.
*
* <blockquote>
* This module, both source code and documentation, is in the
* Public Domain, and comes with NO WARRANTY.
* See http://www.saxproject.org
* for further information.
* </blockquote>
*
* <p>This exception may include information for locating the error
* in the original XML document, as if it came from a {@link Locator}
* object. Note that although the application
* will receive a SAXParseException as the argument to the handlers

```
* in the {@link org.xml.sax.ErrorHandler ErrorHandler} interface,
* the application is not actually required to throw the exception;
* instead,
 it can simply read the information in it and take a
* different action.</p>
*
* <p>Since this exception is a subclass of {@link org.xml.sax.SAXException
* SAXException}, it inherits the ability to wrap another exception.</p>
*
* @since SAX 1.0
* @author David Megginson
* @version 2.0.1 (sax2r2)
* @see org.xml.sax.SAXException
* @see org.xml.sax.Locator
* @see org.xml.sax.ErrorHandler

*/
/**
* This class is for runtime permissions. A RuntimePermission
* contains a name (also referred to as a "target name") but
* no actions list; you either have the named permission
* or you don't.
*
* <P>
* The target name is the name of the runtime permission (see below). The
* naming convention follows the  hierarchical property naming convention.
* Also, an asterisk
* may appear at the end of the name, following a ".", or by itself, to
* signify a wildcard match. For example: "loadLibrary.*" and "*" signify a
* wildcard match, while "*loadLibrary" and "a*b" do not.
* <P>
* The following table lists all the possible RuntimePermission target names,
* and for each provides a description of what
 the permission allows
* and a discussion of the risks of granting code the permission.
*
* <table border=1 cellpadding=5 summary="permission target name,
*  what the target allows,and associated risks">
```

```
* <tr>
* <th>Permission Target Name</th>
* <th>What the Permission Allows</th>
* <th>Risks of Allowing this Permission</th>
* </tr>
*
* <tr>
*   <td>createClassLoader</td>
*   <td>Creation of a class loader</td>
*   <td>This is an extremely dangerous permission to grant.
* Malicious applications that can instantiate their own class
* loaders could then load their own rogue classes into the system.
* These newly loaded classes could be placed into any protection
* domain by the class loader, thereby automatically granting the
* classes the permissions for that domain.</td>
* </tr>
*
* <tr>
*   <td>getClassLoader</td>
*   <td>Retrieval of a class loader (e.g., the class loader for the calling
* class)</td>
*   <td>This would grant an attacker permission to get
 the
* class loader for a particular class. This is dangerous because
* having access to a class's class loader allows the attacker to
* load other classes available to that class loader. The attacker
* would typically otherwise not have access to those classes.</td>
* </tr>
*
* <tr>
*   <td>setContextClassLoader</td>
*   <td>Setting of the context class loader used by a thread</td>
*   <td>The context class loader is used by system code and extensions
* when they need to lookup resources that might not exist in the system
* class loader. Granting setContextClassLoader permission would allow
* code to change which context class loader is used
* for a particular thread, including system threads.</td>
* </tr>
*
* <tr>
*   <td>enableContextClassLoaderOverride</td>
*   <td>Subclass implementation of the thread context class loader methods</td>
*   <td>The context class loader is used by system code and extensions
* when they need to lookup resources that might not exist
 in the system
* class loader. Granting enableContextClassLoaderOverride permission would allow
* a subclass of Thread to override the methods that are used
* to get or set the context class loader for a particular thread.</td>
```

```
* </tr>
*
* <tr>
*   <td>closeClassLoader</td>
*   <td>Closing of a ClassLoader</td>
*   <td>Granting this permission allows code to close any URLClassLoader
* that it has a reference to.</td>
* </tr>
*
* <tr>
*   <td>setSecurityManager</td>
*   <td>Setting of the security manager (possibly replacing an existing one)
* </td>
*   <td>The security manager is a class that allows
* applications to implement a security policy. Granting the setSecurityManager
* permission would allow code to change which security manager is used by
* installing a different, possibly less restrictive security manager,
* thereby bypassing checks that would have been enforced by the original
* security manager.</td>
* </tr>
*
* <tr>
*   <td>createSecurityManager</td>
 *   <td>Creation of a new security manager</td>
*   <td>This gives code access to protected, sensitive methods that may
* disclose information about other classes or the execution stack.</td>
* </tr>
*
* <tr>
*   <td>getenv.{variable name}</td>
*   <td>Reading of the value of the specified environment variable</td>
*   <td>This would allow code to read the value, or determine the
*       existence, of a particular environment variable.  This is
*       dangerous if the variable contains confidential data.</td>
* </tr>
*
* <tr>
*   <td>exitVM.{exit status}</td>
*   <td>Halting of the Java Virtual Machine with the specified exit status</td>
*   <td>This allows an attacker to mount a denial-of-service attack
* by automatically forcing the virtual machine to halt.
* Note: The "exitVM.*" permission is automatically granted to all code
* loaded from the application class path, thus enabling applications
* to terminate themselves. Also, the "exitVM" permission is equivalent
 to
* "exitVM.*".</td>
* </tr>
*
```

```
* <tr>
*   <td>shutdownHooks</td>
*   <td>Registration and cancellation of virtual-machine shutdown hooks</td>
*   <td>This allows an attacker to register a malicious shutdown
* hook that interferes with the clean shutdown of the virtual machine.</td>
* </tr>
*
* <tr>
*   <td>setFactory</td>
*   <td>Setting of the socket factory used by ServerSocket or Socket,
* or of the stream handler factory used by URL</td>
*   <td>This allows code to set the actual implementation
* for the socket, server socket, stream handler, or RMI socket factory.
* An attacker may set a faulty implementation which mangles the data
* stream.</td>
* </tr>
*
* <tr>
*   <td>setIO</td>
*   <td>Setting of System.out, System.in, and System.err</td>
*   <td>This allows changing the value of the standard system streams.
* An attacker may change System.in to monitor and
* steal user input, or may set System.err to a "null" OutputStream,
* which would hide
 any error messages sent to System.err. </td>
* </tr>
*
* <tr>
*   <td>modifyThread</td>
*   <td>Modification of threads, e.g., via calls to Thread
* <tt>interrupt</tt>, <tt>stop</tt>, <tt>suspend</tt>,
* <tt>resume</tt>, <tt>setDaemon</tt>, <tt>setPriority</tt>,
* <tt>setName</tt> and <tt>setUncaughtExceptionHandler</tt>
* methods</td>
* <td>This allows an attacker to modify the behaviour of
* any thread in the system.</td>
* </tr>
*
* <tr>
*   <td>stopThread</td>
*   <td>Stopping of threads via calls to the Thread <code>stop</code>
* method</td>
*   <td>This allows code to stop any thread in the system provided that it is
* already granted permission to access that thread.
* This poses as a threat, because that code may corrupt the system by
* killing existing threads.</td>
* </tr>
*
```

```
* <tr>
*   <td>modifyThreadGroup</td>
*   <td>modification of thread groups, e.g., via calls to ThreadGroup
* <code>destroy</code>, <code>getParent</code>, <code>resume</code>,
 * <code>setDaemon</code>, <code>setMaxPriority</code>, <code>stop</code>,
* and <code>suspend</code> methods</td>
*   <td>This allows an attacker to create thread groups and
* set their run priority.</td>
* </tr>
*
* <tr>
*   <td>getProtectionDomain</td>
*   <td>Retrieval of the ProtectionDomain for a class</td>
*   <td>This allows code to obtain policy information
* for a particular code source. While obtaining policy information
* does not compromise the security of the system, it does give
* attackers additional information, such as local file names for
* example, to better aim an attack.</td>
* </tr>
*
* <tr>
*   <td>getFileSystemAttributes</td>
*   <td>Retrieval of file system attributes</td>
*   <td>This allows code to obtain file system information such as disk usage
*       or disk space available to the caller.  This is potentially dangerous
*       because it discloses information about the system hardware
*       configuration and some information about
 the caller's privilege to
*       write files.</td>
* </tr>
*
* <tr>
*   <td>readFileDescriptor</td>
*   <td>Reading of file descriptors</td>
*   <td>This would allow code to read the particular file associated
*       with the file descriptor read. This is dangerous if the file
*       contains confidential data.</td>
* </tr>
*
* <tr>
*   <td>writeFileDescriptor</td>
*   <td>Writing to file descriptors</td>
*   <td>This allows code to write to a particular file associated
*       with the descriptor. This is dangerous because it may allow
*       malicious code to plant viruses or at the very least, fill up
*       your entire disk.</td>
* </tr>
*
```

```
* <tr>
*   <td>loadLibrary.{library name}</td>
*   <td>Dynamic linking of the specified library</td>
*   <td>It is dangerous to allow an applet permission to load native code
* libraries, because the Java security architecture is not designed to and
* does not prevent malicious behavior at the level of native code.</td>
 * </tr>
*
* <tr>
*   <td>accessClassInPackage.{package name}</td>
*   <td>Access to the specified package via a class loader's
* <code>loadClass</code> method when that class loader calls
* the SecurityManager <code>checkPackageAccess</code> method</td>
*   <td>This gives code access to classes in packages
* to which it normally does not have access. Malicious code
* may use these classes to help in its attempt to compromise
* security in the system.</td>
* </tr>
*
* <tr>
*   <td>defineClassInPackage.{package name}</td>
*   <td>Definition of classes in the specified package, via a class
* loader's <code>defineClass</code> method when that class loader calls
* the SecurityManager <code>checkPackageDefinition</code> method.</td>
*   <td>This grants code permission to define a class
* in a particular package. This is dangerous because malicious
* code with this permission may define rogue classes in
* trusted packages like <code>java.security</code> or <code>java.lang</code>,
 * for example.</td>
* </tr>
*
* <tr>
*   <td>accessDeclaredMembers</td>
*   <td>Access to the declared members of a class</td>
*   <td>This grants code permission to query a class for its public,
* protected, default (package) access, and private fields and/or
* methods. Although the code would have
* access to the private and protected field and method names, it would not
* have access to the private/protected field data and would not be able
* to invoke any private methods. Nevertheless, malicious code
* may use this information to better aim an attack.
* Additionally, it may invoke any public methods and/or access public fields
* in the class.  This could be dangerous if
* the code would normally not be able to invoke those methods and/or
* access the fields  because
* it can't cast the object to the class/interface with those methods
* and fields.
</td>
```

```
* </tr>
* <tr>
*   <td>queuePrintJob</td>
*   <td>Initiation of a print job request</td>
 *   <td>This could print sensitive information to a printer,
* or simply waste paper.</td>
* </tr>
*
* <tr>
*   <td>getStackTrace</td>
*   <td>Retrieval of the stack trace information of another thread.</td>
*   <td>This allows retrieval of the stack trace information of
* another thread.  This might allow malicious code to monitor the
* execution of threads and discover vulnerabilities in applications.</td>
* </tr>
*
* <tr>
*   <td>setDefaultUncaughtExceptionHandler</td>
*   <td>Setting the default handler to be used when a thread
*   terminates abruptly due to an uncaught exception</td>
*   <td>This allows an attacker to register a malicious
*   uncaught exception handler that could interfere with termination
*   of a thread</td>
* </tr>
*
* <tr>
*   <td>preferences</td>
*   <td>Represents the permission required to get access to the
*   java.util.prefs.Preferences implementations user or system root
*   which in turn allows retrieval or update operations
 within the
*   Preferences persistent backing store.) </td>
*   <td>This permission allows the user to read from or write to the
*   preferences backing store if the user running the code has
*   sufficient OS privileges to read/write to that backing store.
*   The actual backing store may reside within a traditional filesystem
*   directory or within a registry depending on the platform OS</td>
* </tr>
*
* <tr>
*   <td>usePolicy</td>
*   <td>Granting this permission disables the Java Plug-In's default
*   security prompting behavior.</td>
*   <td>For more information, refer to Java Plug-In's guides, <a href=
*   "../../../technotes/guides/plugin/developer_guide/security.html">
*   Applet Security Basics</a> and <a href=
*   "../../../technotes/guides/plugin/developer_guide/rsa_how.html#use">
*   usePolicy Permission</a>.</td>
```

/**
* Provides an implementation of the NTLM authentication protocol.
* <p>
* This class provides methods for generating authentication
* challenge responses for the NTLM authentication protocol.  The NTLM
* protocol is a proprietary Microsoft protocol and as such no RFC
* exists for it.  This class is based upon the reverse engineering
* efforts of a wide range of people.</p>
*
* <p>Please note that an implementation of JCE must be correctly installed
 and configured when
* using NTLM support.</p>
*
* <p>This class should not be used externally to HttpClient as it's API is specifically
* designed to work with HttpClient's use case, in particular it's connection management.</p>

1.2403 jdk-zulu 8.68.0.21

1.2403.1 Available under license :

The copyrights in this software and any visual or audio work distributed with
the software belong to Azul Systems, Inc. and those included in all other notice
files either listed in the readme file or contained in any other included notice
files with this distribution. All rights are reserved. Installation of this
software and any Azul software bundled with or derived from this software is
licensed only in accordance with these terms.

Provided you have not received the software directly from Azul and have already
agreed to the terms of a separate license agreement, by installing, using or
distributing this software you, on your own behalf and on behalf of your
employer or principal, agree to be bound by these terms. If you do not agree to
any of these terms, you may not use, copy, transmit, distribute nor install this
software.

The software is developed and owned by Azul and/or any of its affiliates,
subsidiaries or respective suppliers and licensors. The software also includes
certain
 software components and materials ("Open Source Materials") of third
parties ("Third Party Licensors") licensed under certain licenses ("Open Source
Licenses").

Nothing in this Agreement limits your rights under, or grants you rights that
supersede the terms and conditions of any applicable Open Source Licenses.
You must review the Open Source Licenses located at
http://www.azul.com/license/zulu_third_party_licenses.html
to understand your rights under them. In the event that no such third party
license agreements exist, the restrictions contained in this Agreement shall
apply.

With respect to the Open Source Licenses the following shall apply:

 1) You hereby acknowledge and agree that you will be licensing any Open Source
 Materials directly from the applicable Third Party Licensors including the

right to use such Third Party Materials in connection with the software

2) In the event of any inconsistencies or conflicting provisions of the Open Source Licenses and the provisions of this Agreement, the provisions of the Open Source Licenses shall prevail.

THIS SOFTWARE IS PROVIDED BY AZUL "AS-IS" AND WITHOUT EXPRESS OR IMPLIED WARRANTIES, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. IN NO EVENT SHALL AZUL BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY OR CONSEQUENTIAL DAMAGES (INCLUDING BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICE, LOSS OF USE, DATA OR PROFITS; OR BUSINESS INTERRUPTION, HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY WHETHER IN CONTRACT, STRICT LIABILITY OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

The GNU General Public License (GPL)

Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.
51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the

software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also,
for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be
distributed under the terms of
this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided

that you conspicuously and
appropriately publish on each copy an appropriate copyright notice and
disclaimer of warranty; keep intact all the notices that refer to this License
and to the absence of any warranty; and give any other recipients of the
Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may
at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus
forming a work based on the Program, and copy and distribute such modifications
or work under the terms of Section 1 above, provided that you also meet all of
these conditions:

a) You must cause the modified files to carry prominent notices stating
that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or
in part contains or is derived from the Program or any part thereof, to
be
licensed as a whole at no charge to all third parties under the terms of
this License.

c) If the modified program normally reads commands interactively when run,
you must cause it, when started running for such interactive use in the
most ordinary way, to print or display an announcement including an
appropriate copyright notice and a notice that there is no warranty (or
else, saying that you provide a warranty) and that users may redistribute
the program under these conditions, and telling the user how to view a copy
of this License. (Exception: if the Program itself is interactive but does
not normally print such an announcement, your work based on the Program is
not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable
sections of that work are not derived from the Program, and can be reasonably
considered independent and separate works in themselves, then this License, and
its
terms, do not apply to those sections when you distribute them as separate
works. But when you distribute the same sections as part of a whole which is a
work based on the Program, the distribution of the whole must be on the terms
of this License, whose permissions for other licensees extend to the entire
whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your
rights to work written entirely by you; rather, the intent is to exercise the
right to control the distribution of derivative or collective works based on
the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so

long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically
receives a license from the original licensor to
copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you,
then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make
thoroughly clear what is believed to be a
consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA

BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How
to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

One line to give the program's name and a brief idea of what it does.

Copyright (C) <year> <name of author>

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program; if not, write to the Free Software Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA.

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

Gnomovision version 69, Copyright (C) year name of author Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type 'show w'. This is free software, and you are welcome to redistribute it under certain conditions; type 'show c' for details.

The hypothetical commands 'show w' and 'show c' should show the appropriate parts of the General Public License. Of course, the commands you use may be

called something
other than 'show w' and 'show c'; they could even be
mouse-clicks or menu items--whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the program
'Gnomovision' (which makes passes at compilers) written by James Hacker.

signature of Ty Coon, 1 April 1989

Ty Coon, President of Vice

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Library General Public License instead of this License.

"CLASSPATH" EXCEPTION TO THE GPL

Certain source files distributed by Oracle America and/or its affiliates are subject to the following
clarification and special exception to the GPL, but
only where Oracle has expressly included in the particular source file's header the words "Oracle designates this particular file as subject to the "Classpath" exception as provided by Oracle in the LICENSE file that accompanied this code."

Linking this library statically or dynamically with other modules is making
a combined work based on this library. Thus, the terms and conditions of
the GNU General Public License cover the whole combination.

As a special exception, the copyright holders of this library give you
permission to link this library with independent modules to produce an
executable, regardless of the license terms of these independent modules,
and to copy and distribute the resulting executable under terms of your
choice, provided that you also meet, for each linked independent module,
the terms and conditions of the license of that module. An independent
module is a module
which is not derived from or based on this library. If
you modify this library, you may extend this exception to your version of
the library, but you are not obligated to do so. If you do not wish to do
so, delete this exception statement from your version.

1.2405.1 Available under license :

Apache License
Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems,

and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this
License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute
copies of the
Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work,

excluding those notices that do not pertain to any part of
the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding
those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions

for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the
content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions

of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work

(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial
revisions, annotations, elaborations, or other modifications
represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License,
each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work

or a Contribution incorporated within the Work constitutes direct
or contributory patent infringement, then any patent licenses
granted to You under this License for that Work shall terminate
as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute
copies of the
Work or Derivative Works thereof in any medium, with or without
modifications, and in Source or Object form, provided that You
meet the following conditions:

(a) You must give any other recipients of the Work or
Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
that You distribute, all copyright, patent, trademark, and
attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding
those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions

for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

 text of gpl-2.0.txt:

GNU GENERAL PUBLIC LICENSE
Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.,
51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA
Everyone is permitted to copy and distribute verbatim copies
of this license document, but changing it is not allowed.

Preamble

 The licenses for most software are designed to take away your
freedom to share and change it. By contrast, the GNU General Public
License is intended to guarantee your freedom to share and change free
software--to make sure the software is free for all its users. This
General Public License applies to most of the Free Software
Foundation's software and to any other program whose authors commit to
using it. (Some other Free Software Foundation software is covered by
the GNU
 Lesser General Public License instead.) You can apply it to
your programs, too.

 When we speak of free software, we are referring to freedom, not
price. Our General Public Licenses are designed to make sure that you
have the freedom to distribute copies of free software (and charge for
this service if you wish), that you receive source code or can get it
if you want it, that you can change the software or use pieces of it

in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its
contents constitute a work based on the
Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a)
You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the
Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in

themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program
(or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information
you received as to the offer
to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the

operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access
to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program
(or any work based on the
Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously
your obligations under this
License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to

refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes

make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of
promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT
OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the program's name and a brief idea of what it does.>
Copyright (C) <year> <name of author>

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful,
but WITHOUT ANY WARRANTY; without even the implied warranty of
MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the
GNU General Public License for more details.

You should have received a copy of the GNU General Public License along
with this program; if not, write to the Free Software Foundation, Inc.,
51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA.

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this
when it starts in an interactive mode:

Gnomovision version 69, Copyright (C) year
name of author
Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type `show w'.
This is free software, and you are welcome to redistribute it
under certain conditions; type `show c' for details.

The hypothetical commands `show w' and `show c' should show the appropriate
parts of the General Public License. Of course, the commands you use may
be called something other than `show w' and `show c'; they could even be
mouse-clicks or menu items--whatever suits your program.

You should also get your employer (if you work as a programmer) or your
school, if any, to sign a "copyright disclaimer" for the program, if
necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the program
`Gnomovision' (which makes passes at compilers) written by James Hacker.

<signature of Ty Coon>, 1 April 1989
Ty Coon, President of Vice

This General Public License does not permit incorporating your program into
proprietary programs.
If your program is a subroutine library, you may
consider it more useful to permit linking proprietary applications with the
library. If this is what you want to do, use the GNU Lesser General
Public License instead of this License.

GNU GENERAL PUBLIC LICENSE
Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.,
51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA
Everyone is permitted to copy and distribute verbatim copies
of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your
freedom to share and change it. By contrast, the GNU General Public
License is intended to guarantee your freedom to share and change free

software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Lesser General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price.
Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which
gives you legal permission to copy,
distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an

announcement including an appropriate copyright notice and a
notice that there is no warranty (or else, saying that you provide
a warranty) and that users may redistribute the program under
these conditions, and telling the user how to view a copy of this
License. (Exception: if the Program itself is interactive but
does not normally print such an announcement, your work based on
the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If
identifiable sections of that work
are not derived from the Program,
and can be reasonably considered independent and separate works in
themselves, then this License, and its terms, do not apply to those
sections when you distribute them as separate works. But when you
distribute the same sections as part of a whole which is a work based
on the Program, the distribution of the whole must be on the terms of
this License, whose permissions for other licensees extend to the
entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest
your rights to work written entirely by you; rather, the intent is to
exercise the right to control the distribution of derivative or
collective works based on the Program.

In addition, mere aggregation of another work not based on the Program
with the Program (or with a work based on the Program) on a volume of
a storage or distribution medium does not bring the other work under
the scope of this License.

3. You may copy and distribute the Program (or a work based on it,
under Section 2) in object code or executable form under the terms of
Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable
source code, which must be distributed under the terms of Sections
1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three
years, to give any third party, for a charge no more than your
cost of physically performing source distribution, a complete
machine-readable copy of the corresponding source code, to be
distributed under the terms of Sections 1 and 2 above on a medium
customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer
to distribute corresponding source code. (This alternative is
allowed only for noncommercial distribution

and only if you
received the program in object code or executable form with such
an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source
code, even though third parties are not
compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing
or modifying
the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing

version number. If the Program
specifies a version number of this License which applies to it and "any
later version", you have the option of following the terms and conditions
either of that version or of any later version published by the Free
Software Foundation. If the Program does not specify a version number of
this License, you may choose any version ever published by the Free Software
Foundation.

10. If you wish to incorporate parts of the Program into other free
programs whose distribution conditions are different, write to the author
to ask for permission. For software which is copyrighted by the Free
Software Foundation, write to the Free Software Foundation; we sometimes
make exceptions for this. Our decision will be guided by the two goals
of preserving the free status of all derivatives of our free software and
of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE,
THERE IS NO WARRANTY
FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN
OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES
PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED
OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF
MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS
TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE
PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING,
REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING
WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR
REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES,
INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING
OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED
TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY
YOU OR
THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER
PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE
POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest
possible use to the public, the best way to achieve this is to make it
free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest
to attach them to the start of each source file to most effectively
convey the exclusion of warranty; and each file should have at least
the "copyright" line and a pointer to where the full notice is found.

<one line to give the program's name and a brief idea of what it does.>
Copyright (C) <year> <name of author>

This program is free software; you can redistribute it and/or modify
it under the terms of the GNU
General Public License as published by
the Free Software Foundation; either version 2 of the License, or
(at your option) any later version.

This program is distributed in the hope that it will be useful,
but WITHOUT ANY WARRANTY; without even the implied warranty of
MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the
GNU General Public License for more details.

You should have received a copy of the GNU General Public License along
with this program; if not, write to the Free Software Foundation, Inc.,
51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA.

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this
when it starts in an interactive mode:

Gnomovision version 69, Copyright (C) year name of author
Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type `show w'.
This is free software, and you are welcome to redistribute
it
under certain conditions; type `show c' for details.

The hypothetical commands `show w' and `show c' should show the appropriate
parts of the General Public License. Of course, the commands you use may
be called something other than `show w' and `show c'; they could even be
mouse-clicks or menu items--whatever suits your program.

You should also get your employer (if you work as a programmer) or your
school, if any, to sign a "copyright disclaimer" for the program, if
necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the program
`Gnomovision' (which makes passes at compilers) written by James Hacker.

<signature of Ty Coon>, 1 April 1989
Ty Coon, President of Vice

This General Public License does not permit incorporating your program into
proprietary programs. If your program is a subroutine library, you may
consider it more useful to permit linking proprietary applications with the
library. If this
 is what you want to do, use the GNU Lesser General

CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY,
OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE
OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.
This repository uses 2 different licenses :
- all files in the `lib` directory use a BSD 2-Clause license
- all other files use a GPLv2 license, unless explicitly stated otherwise

Relevant license is reminded at the top of each source file,
and with presence of COPYING or LICENSE file in associated directories.

This model is selected to emphasize that
files in the `lib` directory are designed to be included into 3rd party applications,
while all other files, in `programs`, `tests` or `examples`,
receive more limited attention and support for such scenario.

GNU GENERAL PUBLIC LICENSE
Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.,
51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA
Everyone is permitted to copy and distribute verbatim copies
of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your
freedom to share and change it. By contrast, the GNU General Public
License is intended to guarantee your freedom to share and change free
software--to make sure the software is free for all its users. This
General Public License applies to most of the Free Software

Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Lesser General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price.
Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which
gives you legal permission to copy,
distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide

a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or

otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions

either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least

the "copyright" line and a pointer to where the full notice is found.

<one line to give the program's name and a brief idea of what it does.>
Copyright (C) <year> <name of author>

This program is free software; you can redistribute it and/or modify
it under the terms of the GNU
General Public License as published by
the Free Software Foundation; either version 2 of the License, or
(at your option) any later version.

This program is distributed in the hope that it will be useful,
but WITHOUT ANY WARRANTY; without even the implied warranty of
MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the
GNU General Public License for more details.

You should have received a copy of the GNU General Public License along
with this program; if not, write to the Free Software Foundation, Inc.,
51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA.

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this
when it starts in an interactive mode:

Gnomovision version 69, Copyright (C) year name of author
Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type `show w'.
This is free software, and you are welcome to redistribute
it
under certain conditions; type `show c' for details.

The hypothetical commands `show w' and `show c' should show the appropriate
parts of the General Public License. Of course, the commands you use may
be called something other than `show w' and `show c'; they could even be
mouse-clicks or menu items--whatever suits your program.

You should also get your employer (if you work as a programmer) or your
school, if any, to sign a "copyright disclaimer" for the program, if
necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the program
`Gnomovision' (which makes passes at compilers) written by James Hacker.

<signature of Ty Coon>, 1 April 1989
Ty Coon, President of Vice

This General Public License does not permit incorporating your program into
proprietary programs. If your program is a subroutine library, you may

consider it more useful to permit linking proprietary applications with the
library. If this
is what you want to do, use the GNU Lesser General
Public License instead of this License.

PCRE LICENCE

Please see the file LICENCE in the PCRE distribution for licensing details.

End
PCRE LICENCE

PCRE is a library of functions to support regular expressions whose syntax
and semantics are as close as possible to those of the Perl 5 language.

Release 8 of PCRE is distributed under the terms of the "BSD" licence, as
specified below. The documentation for PCRE, supplied in the "doc"
directory, is distributed under the same terms as the software itself. The data
in the testdata directory is not copyrighted and is in the public domain.

The basic library functions are written in C and are freestanding. Also
included in the distribution is a set of C++ wrapper functions, and a

just-in-time compiler that can be used to optimize pattern matching. These
are both optional features that can be omitted when the library is built.
