To Whom It May Concern:

A conformance review of Cisco IOS-XE Release v17.12 (“the Product”) deployed on the following platform:

- Cisco Catalyst Industrial Ethernet 9300 Series Switch

was completed and found that the Product incorporates the following FIPS 140-2 validated cryptographic module:

- Cisco IOS Common Cryptographic Module (IC2M) (FIPS 140-2 Cert. #4222)  
<https://csrc.nist.gov/projects/cryptographic-module-validation-program/certificate/4222>

Cisco confirms that the cryptographic module listed above provides cryptographic services for the following:

- SSHv2
- SNMPv3

The review/testing confirmed that:

1. The cryptographic module (mentioned above) does initialize in a manner that is compliant with its Security Policy.
2. All cryptographic algorithms used for session establishment are handled within the cryptographic module.
3. All underlying cryptographic algorithms support each service’s key derivation function.

This letter has been generated in accordance with guidance provided by the Cryptographic Module Validation Program (CMVP) (<https://csrc.nist.gov/Projects/cryptographic-module-validation-program/validated-modules>).

The CMVP has not independently reviewed this analysis, testing, or the results.

Any questions regarding these statements may be directed via e-mail to the Cisco Global Certification Team (GCT) at [certteam@cisco.com](mailto:certteam@cisco.com).

Sincerely,

A handwritten signature in black ink that reads "Edward D. Paradise".
