

September 12, 2017

To Whom It May Concern:

Acumen Security verified that the following product faithfully embeds a FIPS 140-2 validated cryptographic module,

- Cisco SIP IP Phone firmware for 7800 Series version 12.0 - compatible with CUCM 10.5(2)+
- Cisco SIP IP Phone firmware for 8800 Series version 12.0 - compatible with CUCM 10.5(2)+

The software is known to operate on the following platforms

- 7811
- 7821
- 7832
- 7841
- 7861
- 8811
- 8832
- 8832NR
- 8841
- 8845
- 8851
- 8851NR
- 8861
- 8865
- 8865NR

During the course of the review, Acumen Security confirmed that the following FIPS 140-2 cryptographic module is incorporated into the product,

- Cisco FIPS Object Module (FOM) (Software Version 6.0) – Cert # 2505

Acumen Security confirmed that the products leverage the above referenced cryptographic module to provide cryptography for the following services, **Transport Layer Security, sRTP, Secure Storage, RSA Signature Verification, File Authentication and Encryption, and Image Authentication.**

The cryptographic module provides all of the cryptographic functionality for each of the services listed above, including:

- Session establishment and key derivation functions (TLS),
- Hashing and Authentication (TLS, sRTP, File Authentication, Image Authentication),
- Symmetric encryption (TLS, sRTP, Secure Storage, File Encryption),
- Asymmetric cryptography (TLS, RSA Signature Verification).

Additionally, Acumen Security confirmed that the above referenced cryptographic module is initialized in a manner consistent with the instructions provided in the non-proprietary Security Policy. Details of the verification may be obtained from Cisco Systems, Inc. at the request of interested parties. This letter represents the independent opinions of Acumen Security and does not imply endorsement of the product by the CMVP or any other parties.

Sincerely

Ashit Vora
Laboratory Director
Acumen Security
