

Cisco Unified Communications Manager

High Severity CVE-2012-3949: Denial of Service in Cisco Unified Communications Manager

Cisco Security Advisory ID : cisco-sa-20120926-cucm

[CVE-2012-3949](#)

Published : 2012-09-26 16:00

Version : 1.0 : Final

CVSS Score : 7.8

Workarounds : No Workarounds available

Cisco Bug IDs : [CSCtj33003](#) [CSCtw84664](#) [CSCtw66721](#)

Denial of Service (DoS) vulnerability in Cisco Unified Communications Manager (CUCM) versions 6.0(1) through 6.1(2) allows an attacker to cause a denial of service by sending a specially crafted SIP INVITE message.

Vulnerability Details

Cisco Unified Communications Manager (CUCM) Session Initiation Protocol (SIP) message processing vulnerability. The vulnerability exists in the SIP INVITE message processing logic, which does not properly validate the length of the 'To' header field.

The vulnerability is caused by a buffer overflow in the SIP INVITE message processing logic. An attacker can send a SIP INVITE message with a 'To' header field that is longer than the allocated buffer, causing a denial of service.

For more information, see the Cisco Security Advisory at:
