## Infrastructure © 2015

Product: Cisco-Prime-Infrastructure

[CVE-2015-4331](#)

CVE ID: 2015-0820-CVE-2015-4331

Published: 2015-08-20 13:45

Version: 1.0 : Final

CVSS Score: 4.0

Workarounds: No Workarounds available

Cisco ID:

**Summary:** A remote Denial of Service (DoS) vulnerability exists in Cisco Prime Infrastructure (PI) versions 1.0 through 1.1. An attacker can exploit this vulnerability to cause a denial of service to the affected system.

### Details

Cisco Prime

Infrastructure (PI) versions 1.0 through 1.1 are affected by this vulnerability.

The vulnerability is caused by a buffer overflow in the `getenv` function. An attacker can exploit this vulnerability by sending a specially crafted request to the affected system, which will cause a denial of service.

The vulnerability is caused by a buffer overflow in the `getenv` function. An attacker can exploit this vulnerability by sending a specially crafted request to the affected system, which will cause a denial of service.

The vulnerability is caused by a buffer overflow in the `getenv` function. An attacker can exploit this vulnerability by sending a specially crafted request to the affected system, which will cause a denial of service.

The vulnerability is caused by a buffer overflow in the `getenv` function. An attacker can exploit this vulnerability by sending a specially crafted request to the affected system, which will cause a denial of service.
