

Cisco Unified Contact Center

Express® Extensible Messaging and Presence Protocol (XMPP)

Cisco Security Advisory ID : cisco-sa-

[CVE-2017-](#)

20170621-ucce

[6722](#)

Published : 2017-06-21 16:00

Version : Final

CVSS Score : [6.1](#)

Workarounds : No workarounds available

Cisco ID : [CSCuw86638](#)

Summary - A vulnerability in the Cisco Unified Contact Center Express (UCCx) Extensible Messaging and Presence Protocol (XMPP) component could allow an attacker to bypass authentication and gain unauthorized access to the system.

Details

Cisco Unified Contact Center Express (UCCx) Extensible Messaging and Presence

Protocol (XMPP) is a protocol used for real-time communication between devices. It is used for instant messaging, voice over IP, and other real-time applications.

The vulnerability in the XMPP component allows an attacker to bypass authentication and gain unauthorized access to the system. This is achieved by exploiting a flaw in the authentication process.

The vulnerability is located in the XMPP component of the Cisco Unified Contact Center Express (UCCx) software. It affects versions 10.5(1) and earlier.

The vulnerability is a Denial of Service (DoS) issue. An attacker can exploit this vulnerability to cause a denial of service to the system.

Impact

The impact of this vulnerability is a Denial of Service (DoS) to the system.

This vulnerability affects the Cisco Unified Contact Center Express (UCCx) software.

The severity of this vulnerability is Medium. It is rated as a CVSS score of 6.1.

The vulnerability is located in the XMPP component of the Cisco Unified Contact Center Express (UCCx) software.

The vulnerability is a Denial of Service (DoS) issue. An attacker can exploit this vulnerability to cause a denial of service to the system.

The vulnerability is located in the XMPP component of the Cisco Unified Contact Center Express (UCCx) software. It affects versions 10.5(1) and earlier.
