Summary: A vulnerability in Cisco Firepower Management Center (FMC) allows an attacker to execute arbitrary code via a crafted request.

Details

Cisco Firepower Management

Center (FMC) is a software solution that provides a centralized management console for Cisco Firepower Threat Defense (FTD) devices.

The vulnerability exists in the way FMC processes requests from external devices. A specially crafted request can cause a denial of service (DoS) condition.

The vulnerability is caused by a buffer overflow in the processing of a request. This can lead to a crash of the FMC process.
