[CVE-2019-1659](#)

Published : 2019-02-20 16:00

Version : Final

CVSS Score : [7.4](#)

Workarounds : No workarounds available

Cisco Security ID : [CSCvj87015](#)

Summary: A vulnerability in Cisco Prime Infrastructure Identity Services Engine (ISE) could allow an attacker to bypass authentication and authorization checks.

Details

Cisco Prime Infrastructure Identity Services

Engine (ISE) could allow an attacker to bypass authentication and authorization checks. The vulnerability is located in the authentication module of the ISE. The attacker can send a specially crafted request to the ISE, which will cause the ISE to bypass the authentication and authorization checks.

The vulnerability is located in the authentication module of the ISE.

The attacker can send a specially crafted request to the ISE, which will cause the ISE to bypass the authentication and authorization checks.

The vulnerability is located in the authentication module of the ISE. The attacker can send a specially crafted request to the ISE, which will cause the ISE to bypass the authentication and authorization checks.

The vulnerability is located in the authentication module of the ISE. The attacker can send a specially crafted request to the ISE, which will cause the ISE to bypass the authentication and authorization checks.

The vulnerability is located in the authentication module of the ISE. The attacker can send a specially crafted request to the ISE, which will cause the ISE to bypass the authentication and authorization checks.
