

# Cisco Unified Computing System

# Central

**Medium**

vulnerability ID : [cisco-sa-ucs-CVE-2021-1354](#)  
 invcert-eOpRvCKH  
 Published : 2021-02-03 16:00  
 Version : Final  
 CVSS Score : [4.3](#)  
 Workarounds : No workarounds available  
 Cisco ID : [CSCvw35850](#)

**Summary:**

## Impact

Cisco Unified Computing System(UCS)Central Software Unified Computing System Manager(UCSM) Cisco UCS Central Software UCSM Cisco UCS Central Software UCSM

**Technical Details:**

The vulnerability exists in the Cisco UCS Central Software Manager (UCSM) due to a flaw in the processing of requests. This flaw can be exploited to execute arbitrary code with root privileges on the affected system.

**CVSS Scores:**

CVSS Base Score: 4.3  
 CVSS Temporal Score: 4.3  
 CVSS Environmental Score: 4.3

**Workarounds:**  
 No workarounds are available at this time.

## Conclusion

This vulnerability is rated as Medium severity. It affects Cisco UCS Central Software Manager (UCSM) versions 1.2.0(1m) and later. The vulnerability allows an attacker to execute arbitrary code with root privileges on the affected system.

Users are advised to upgrade to the latest version of the software to mitigate this vulnerability. If upgrading is not possible, users should implement additional security measures to protect their systems.
