Cisco Identity Services Engine CVE-2022-7Q4TNYUx

Severity

Cisco Identity Services Engine

Cisco Identity Services Engine CVE-2022-7Q4TNYUx is a critical vulnerability in Cisco Identity Services Engine (ISE) that allows an attacker to bypass authentication and authorization services. This vulnerability affects Cisco ISE versions 3.10(1) through 3.10(1.6).
 The vulnerability is caused by a flaw in the authentication process. An attacker can exploit this vulnerability to gain unauthorized access to the network. The impact is severe, as it allows an attacker to bypass authentication and authorization services.
 The severity of this vulnerability is High, with a CVSS score of 6.3. There are no workarounds available for this vulnerability.
 Cisco has released a security advisory for this vulnerability. You can find more information about this vulnerability at the following URL: <https://sec.cloudapps.cisco.com/security/center/content/CiscoSecurityAdvisory/cisco-sa-ise-7Q4TNYUx>
